Science Fiction and Fantasy Book Review Neil Barron, R. Reginald, Robert Reginald, 2009-11 *Science Fiction Fantasy Book Review* was founded in 1979 to provide comprehensive coverage of all the major and minor books being released in the genre at that time. This was the golden era of SF publishing with a thousand titles old and new hitting the stands and the bookshelves each and every year. From the older classics to the newest speculative fiction, this was the period when the best and the brightest shined forth their talents. SF FBR included reviews by writers in the field, by amateur critics, and by librarians and University professors. Over a thousand books were covered during the single year of publication, many of them having been reviewed nowhere else before or since. The January 1980 issue includes a comprehensive index of all the works featured during the preceding year. This reprint will be a welcome addition to the literature of science fiction and fantasy criticism. Neil Barron is a retired bibliographer and literary critic, editor of the acclaimed *Anatomy of Wonder* series. Robert Reginald was the publisher for twenty-five years of Borgo Press and has authored over 110 books of his own.

Falling for Science Sherry Turkle, 2011-09-30 Passion for objects and love for science: scientists and students reflect on how objects fired their scientific imaginations. This is a book about science, technology, and love, writes Sherry Turkle. In it, we learn how a love for science can start with a love for an object: a microscope, a modem, a mud pie, a pair of dice, a fishing rod. Objects fire imagination and set young people on a path to a career in science. In this collection, distinguished scientists, engineers, and designers, as well as twenty-five years of MIT students, describe how objects encountered in childhood became part of the fabric of their scientific selves. In two major essays that frame the collection, Turkle tells a story of inspiration and connection through objects that is often neglected in standard science education and in our preoccupation with the virtual. The senior scientists' essays trace the arc of a life: the gears of a toy car introduce the chain of cause and effect to artificial intelligence; pioneer Seymour Papert's microscopes disclose the mystery of how things work to MIT President and neuroanatomist Susan Hockfield; architect Moshe Safdie describes how his boyhood fascination with steps, terraces, and the wax hexagons of beehives lead him to a life immersed in the complexities of design. The student essays tell stories that echo these narratives: plastic eggs in an Easter basket reveal the power of centripetal force; experiments with baking illuminate the geology of planets; LEGO bricks model worlds carefully engineered and colonized. All of these voices, students and mentors, testify to the power of objects to awaken and inform young scientific minds. This is a truth that is simple, intuitive, and easily overlooked.

The Methodology of Positive Economics Uskali Mäki, 2009-05-28 Milton Friedman's 1953 essay 'The methodology of positive economics' remains the most cited influential and controversial piece of methodological writing in twentieth century economics. Since its appearance the essay has shaped the image of economics as a scientific discipline both within and outside of the academy. At the same time there has been an ongoing controversy over the proper interpretation and normative evaluation of the essay. Perceptions have been sharply divided with some viewing economics as a scientific success thanks to its adherence to Friedman's principles, others taking it as a failure for the same reason. In this book a team of world renowned experts in the methodology of economics cast new light on Friedman's methodological arguments and practices from a variety of perspectives. It provides the 21st century reader with an invaluable assessment of the impact and contemporary significance of Friedman's seminal work.
