Floris Cohen, 1994-10-03 In this first book length historiographical study of the Scientific Revolution H Floris Cohen examines the body of work on the intellectual social and cultural origins of early modern science Cohen critically surveys a wide range of scholarship since the nineteenth century offering new perspectives on how the Scientific Revolution changed forever the way we understand the natural world and our place in it Cohen s discussions range from scholarly interpretations of Galileo Kepler and Newton to the question of why the Scientific Revolution took place in seventeenth century Western Europe rather than in ancient Greece China or the Islamic world Cohen contends that the emergence of early modern science was essential to the rise of the modern world in the way it fostered advances in technology A valuable entry to the literature on the Scientific Revolution this book assesses both a controversial body of scholarship and contributes to understanding how modern science came into the world Toward a New Science of Educational Testing and Assessment Harold Berlak, 1992-02-06 The authors of this book question the assumptions of the psychometric paradigm that underlie virtually all criterion referenced and standardized tests used in North American schools They make a compelling case for a new science of educational testing and assessment one that shifts decision making from central administration to individual schools and communities Harold Berlak argues that the concept of tests as scientific instruments validated by technical experts is anachronistic and self contradictory He makes a case for a contextual paradigm an approach which assumes that consensus

on educational goals and national testing programs is neither possible nor desirable. Assessment practices in a democratic society must acknowledge and affirm differences in values, beliefs, and material interests among individuals and groups over the purposes and practices of schooling.
