

## Lesson 1.1: Properties of Tangents

### Student Outcomes

- Students demonstrate that a tangent to a circle at a given point  $P$  is perpendicular to the radius drawn to that point.
- Students understand tangents to a circle through a point  $P$  outside.
- Students prove that tangent segments to a circle from the same point are congruent lengths.

### Lesson Overview

Pages 1–4 explore the basic relationship between lines tangent to a circle, the secant-tangent theorem, and explore several consequences to justify, as appropriate, the following. The chart of tangents to a circle is presented in Lesson 1.2 and 1.3.

During the lesson, model the following definitions if necessary.

**Intersection of a circle:** The intersection of a circle with another (straight) circle is the point of tangency to the circle where the other intersects the circle (2 is the minimum).

A point on the intersection of a circle is said to be inside the circle, and a point outside the circle with no other.

**Distance to a circle:** The distance of a circle with center  $O$  and radius  $r$  is the length of the line segment from the center  $O$  to the point  $P$ .

A point outside a circle is said to be outside the circle.

### Classroom

#### Opening (20 minutes)

- Students work in pairs to solve.
- Students share a circle with a line.

Have students share their work and for the lesson.

- Introduce the properties of tangents to a circle.
