Question Evaluation Methods Jennifer Madans, Kristen Miller, Aaron Maitland, Gordon B. Willis, 2011-10-14. Insightful observations on common question evaluation methods and best practices for data collection in survey research. Featuring contributions from leading researchers and academicians in the field of survey research. *Question Evaluation Methods: Contributing to the Science of Data Quality* sheds light on question response error and introduces an interdisciplinary cross method approach that is essential for advancing knowledge about data quality and ensuring the credibility of conclusions drawn from surveys and censuses. Offering a variety of expert analyses of question evaluation methods, the book provides recommendations and best practices for researchers working with data in the health and social sciences. Based on a workshop held at the National Center for Health Statistics, NCHS, this book presents and compares various question evaluation methods that are used in modern day data collection and analysis. Each section includes an introduction to a method by a leading authority in the field followed by responses from other experts that outline related strengths, weaknesses and underlying assumptions. Topics covered include Behavior coding, Cognitive interviewing, Item response theory, Latent class analysis, Split sample experiments, Multitrait multimethod experiments, Field based data methods. A concluding discussion identifies common themes across the presented material and their relevance to the future of survey methods, data analysis and the production of Federal statistics. Together the methods presented in this book offer researchers various scientific approaches to evaluating survey quality to ensure that the responses to these questions result in reliable, high quality data. *Question Evaluation Methods* is a valuable supplement for courses on questionnaire design, survey methods and evaluation methods at the upper undergraduate and graduate levels. It also serves as a reference for government statisticians, survey methodologists and researchers and practitioners who carry out survey research in the areas of the social and health sciences.

Development, structure and function of vertebrate retinas: A virtual festschrift for Prof. Steve Massey David W. Marshak, Judith Mosinger Ogilvie, Chai-An Mao, Christophe P. Ribelayga, 2024-09-19 This is a remarkable time to study the vertebrate retina either as a model for the brain or to understand the first steps in vision. We have known about the diversity of retinal neurons and glia for more than one hundred years and we are now extending these findings and making new discoveries about retinal cell types by analyzing gene expression in single cells. We have made significant progress toward our ultimate goals of describing the neural circuits in the retinas at the level of connections between identified populations of neurons and understanding neuronal and glial cell function at the molecular level. We have also made great strides toward understanding retinal development and the etiology of retinal diseases. Physiologists are now using more realistic stimuli and modern analytical methods to analyze the mechanisms underlying light responses of retinal neurons and this has led to more accurate computational models of neural circuits in the retina. My colleague at the McGovern Medical School in Houston, Steve Massey, has made many important contributions to this field both as a researcher and as a mentor, and he is planning his retirement. Judith Ogilvie, Christophe Ribelayga, Chai-an Mao, and I will dedicate this issue to him and plan to publish some of his latest work. This Research Topic will include mini reviews and brief communications about neurons and neural circuits in vertebrate retinas. The scope will be very broad, including anatomical, physiological, psychophysical, and computational approaches to this topic. Potential topics include but are not restricted to: Development, morphology, and synaptic connections of neuronal types; Light responses; Spontaneous activity and membrane properties of retinal neurons; Gene expression and other aspects of cell biology of identified retinal neurons; Release of neurotransmitters and modulators and their effects in the retina; Structure and function of electrical synapses in the retina; Neural circuits that mediate responses to color contrast and movement; Roles of neuroglia in retinal development, homeostasis, and light responses; Contributions of neural circuits in the retina to visual perception; Evolution of neuronal types and neural circuits in the retina; Novel techniques for analyzing retinal neurons and neural circuits; Non-invasive methods to analyze retinal structure and function; Etiology of retinal diseases and potential new therapies; Directions for future research on the vertebrate retina.
