ACTIVITY 1: "DOMINO DNA WITH ALPHA, BETA, AND GAMMA"

Materials Per Group: 10 dominoes, 1 small Styrofoam ball, 1 small plastic ball and 1 tennis ball
Procedures:

1. Group representative should gather the activity materials and place them on the desk.
2. Set each domino on its long edge and spread them out leaving a four-centimeter space between each (about the length of one domino).
3. Arrange the dominoes in two parallel rows of five dominoes each. Space the rows about eight centimeters apart (about two domino lengths). Now, you should have two straight and parallel rows of evenly spaced and upright dominoes.

4. **FLICK (not roll)** the tennis ball toward the dominoes. Record the "damage" on your activity sheet. (How many dominoes were knocked down?)
5. Repeat steps three and four two more times to complete 3 trials.
6. Repeat steps three, four, and five using the small plastic ball, and then the Styrofoam ball.
7. Calculate the average values for each ball, and identify which type of ionizing radiation each ball represents (and record in inferences column).

Observations					Inferences
