Sabiston Textbook Of Surgery 18th Edition Rar:

The Johns Hopkins ABSITE Review Manual , Gowned and Gloved Surgery Robert E. Roses,2009-01-01

Performing well and learning effectively during your clinical rotations in general surgery are challenges you face everyday. They are equally important in caring for patients and earning the grade. Time constraints and last minute assignments in the OR make reading the necessary material difficult and can jeopardize your evaluation by senior residents and attendings on your rotation. This title in the Gowned and Gloved series provides a concise review of the most common surgical procedures and relevant surgical anatomy to help you shine in the OR without getting bogged down in theory and extraneous information typical of more expansive text books. It provides the edge you need in the OR delivering not only the information necessary to do well during your rotation but also a plan on how to maximize your time, make the best impression and ace your rotation. Features case studies with appropriate images in each chapter to illustrate the types of clinical scenarios you may experience. Gives you the details you need to understand all aspects of each procedure. Includes the surgical indications and relative contraindications to specific procedures giving you the big picture principles for each procedure. Discusses standard postoperative protocols and patient rehabilitation that extends your knowledge outside the OR. Uses intraoperative pictures, diagrams and treatment algorithms to highlight the important details of common surgical procedures ranging from positioning, prepping and draping the patient to the surgical exposure and pertinent applied surgical anatomy to the intricate aspects of the techniques. Uses call out boxes throughout every chapter that emphasize key information and surgical cautions and reflect common questions that the attending may ask you or that you may want to ask your attending in the OR. Presents a consistent chapter organization including bulleted lists and treatment algorithms that make reference a snap.
