Value Relevance Of Textual Characteristics Olga Bogachek, Francesco Grossetti, 2025-02-07 This book explores the evolution of value relevance in finance and accounting While synthesizing existing literature to provide a robust theoretical framework it also extends the discourse by incorporating textual characteristics into the traditional model of value relevance The authors integrate two pivotal but often disparate research domains value relevance and linguistic analysis in accounting disclosures This inclusion enriches our understanding of how qualitative factors such as tone and readability in corporate disclosures interact with quantitative measures to influence market behavior and investor decision making The result is a nuanced multi dimensional analysis that not only bridges gaps in current academic research but also offers new avenues for practical application The book starts by laying the groundwork for the concept of value relevance discussing its evolution in the academic literature theoretical models their assumptions and limitations It then turns the spotlight onto corporate disclosure theories thereby illuminating the strategies and psychological factors that influence how companies report their financials and accompanying narrative discussions The authors demonstrate how the information is strategically disclosed and received adding another layer of complexity to the concept of value relevance The novel contribution of this manuscript comes from the methodological approach incorporating textual analysis techniques into a widely accepted Ohlson value relevance model The authors empirically integrate textual elements like tone and readability and demonstrate how they can play a significant role in how investors perceive a company The empirical section of the book provides robust evidence to support the central thesis that qualitative elements in financial disclosures are not merely supplementary but are indeed value relevant This enhances the book s applicability across both academic and practical settings In conclusion this book serves as a comprehensive guide for those interested in the complexities of value relevance as well as the dynamics of

financial disclosures It offers valuable insights that are both theoretically robust and empirically validated making it a useful resource for academics practitioners and regulators It enriches the academic discourse by offering new pathways for research and practical application in a world where financial information is increasingly digitized The target audience for this book includes academics in the fields of accounting and finance as well as practitioners and regulators who are keen on understanding the evolving dynamics of how financial information impacts the capital markets District Heating and Cooling Networks in the European Union Antonio Colmenar-Santos, David Borge-Díez, Enrique Rosales-Asensio, 2017-07-18 This book evaluates the potential of the combined use of district heating networks and cogeneration in the European Union EU It also proposes measures to remove barriers hindering their widespread implementation formulates policies for their implementation and evaluates their economic energy and environmental consequences The book presents a preliminary assessment of the likely cost and the impact of widespread adoption of district heating networks and cogeneration carried out in three cities that represent the variety of climatic conditions in the EU Based on this assessment it is estimated that by undertaking the maximum economically feasible implementation across the EU fuel savings of 95M year would be achieved representing energy savings of 6 400 petajoules PJ which is around 15% of the total final energy consumption in the EU in 2013 46 214 5 PJ Using simple and quick calculations and not specific software the method used allows the evaluation of the potential benefits of retrofitting existing power plants into cogeneration plants and connecting them to nearby heating networks In light of increasing energy costs and environmental concerns the book is of interest to heating engineers city planners and policy makers around the globe
