workers symptoms correlated to exposure to a specific compound dimethylisopropanolamine NIOSH advised the company about steps they could take to eliminate the problem After these changes were made NIOSH returned a year later to confirm that workers vision had returned to normal and that the plant air concentration was lower for that compound This is just one example of how the 300 methods in NMAM can help keep workers safe Impact The occupational safety and health OSH community worldwide other countries OSH agencies and commercial laboratories turn to NIOSH for assistance in developing new methods for finding solutions to monitoring occupational exposures and for resolving analytical problems related to worker health and safety In addition commercial products to detect lead beryllium and methamphetamine have been developed that are based on NIOSH methods These kits Full Disclosure BeFinder MethAlert and MethChek can be used on site providing a rapid indication of contamination Once the degree of contamination is known users can then select personal protective equipment goggles gloves impervious clothing or respirators for example or take other actions to avoid exposure to these hazards NIOSH works with professional organizations and regulatory agencies to provide both consultation and rigorous research that is responsive to current occupational health issues Recognized as a leading source for reliable accurate analytical methods NMAM is one of the most frequently consulted and requested documents from the NIOSH Web site These methods are accessible to people worldwide from the U S Government Printing Office are located in the NIOSH Pocket Guide <http://www.cdc.gov/niosh/npg/> and on the NIOSH Web <http://www.cdc.gov/niosh/nmam/> or call 1 800 232 4636 for more information NIOSHTIC 2
