new opportunities to explore extreme environments that would previously not have been possible For example robots that are deployed to study environmental processes such remote volcanos monitor the climate variables under the adverse weather conditions understand underground mines and explore deep oceans which are all inaccessible or hazardous for the human Industrial applications can also often be situated in extreme environments such as offshore oil and gas and nuclear industries In such applications the autonomous robot is expected to complete tasks such as repair and maintenance exploration reconnaissance inspection and transportation which is either done in isolation or as a team of cooperative robots Due to the harsh and severe conditions of such environments designing an advanced robotic system that can endure them is a challenging task The robot needs to cope with the time varying restricted uncertain and unstructured nature of the environment to achieve the planning and execution of the tasks This in turn demands development of advanced robust and adaptive motion control and navigation algorithms along with machine learning and deep learning algorithms with high cognitive capability for the robot to perceive the surrounding environment effectively The use of both single and multi robot platforms can be advantageous depending on the specific application and environment

**The Best Interface Is No Interface** Golden Krishna,2015-01-31 Our love affair with the digital interface is out of control We ve embraced it in the boardroom the bedroom and the bathroom Screens have taken over our lives Most people spend over eight hours a day staring at a screen and some technological innovators are hoping to grab even more of your eyeball time You have screens in your pocket in your car on your appliances and maybe even on your face Average smartphone users check their phones 150 times a day responding to the addictive buzz of Facebook or emails or Twitter Are you sick There s an app for that Need to pray There s an app for that Dead Well there s an app for that too And most apps are intentionally addictive distractions that end up taking our attention away from things like family friends sleep and oncoming traffic There s a better way In this book innovator Golden Krishna challenges our world of nagging screen based bondage and shows how we can build a technologically advanced world without digital interfaces In his insightful raw and often hilarious criticism Golden reveals fascinating ways to think beyond screens using three principles that lead to more meaningful innovation Whether you re working in technology or just wary of a gadget filled future you ll be enlightened and entertained while discovering that the best interface is no interface
