Century 21 Accounting Swanson, Melanie H. Ross, Hanson, Gilbert, 1994 Dispute Settlement in the UN Convention on the Law of the Sea Natalie Klein, 2005-01-06 The United Nations Convention on the Law of the Sea is one of the most important constitutive instruments in international law Not only does this treaty regulate the uses of the world's largest resource but it also contains a mandatory dispute settlement system an unusual phenomenon in international law While some scholars have lauded this development as a significant achievement others have been highly sceptical of its comprehensiveness and effectiveness This book explores whether a compulsory dispute settlement mechanism is necessary for the regulation of the oceans under the Convention The requisite role of dispute settlement in the Convention is determined through an assessment of its relationship to the substantive provisions Klein firstly describes the dispute settlement procedure in the Convention She then takes each of the issue areas subject to limitations or exceptions to compulsory procedures entailing binding decisions and analyses the interrelationship between the substantive and procedural rules *Resources in Education* ,1992 Cumulated Index Medicus ,1974 *Towards embodied artificial cognition: TIME is on my side* Michail Maniadakis, Marc Wittmann, Sylvie Droit-Volet, Yoonsuck Choe, 2015-06-05 From the moment of birth humans and animals are immersed in time all experiences and actions evolve in time and are dynamically structured The perception of time is thus a capacity indispensable for the control of perception cognition and action The last 10 years have witnessed a remarkable resurgence of interest in timing and time perception with a continuously increasing number of researchers exploring these innate abilities However existing robotic systems largely neglect the key role of time in cognition and action This is a major barrier for accomplishing the long term goal of symbiotic human robot interaction The critical question is how is time instantiated in a biological system and how can it be implemented in an artificial system Recent years have for example seen an increasing focus on the relationship between affective states and the experience of time The influence of affective states on subjective time seems to depend on the embodiment of emotions intertwined affective and interoceptive states may create our subjective experience of time Since robotic systems are in essence embodied information processing systems that interact with the real world we hope to inspire a reciprocal exchange of ideas between the field of Robotics and the Cognitive Neurosciences In this research topic we call researchers from different disciplines Robotics Neurosciences and Psychology to present their empirical work their models or reviews on the question of how time judgments are instantiated in biological and artificial systems Of particular interest are papers on time perception in humans and animals with a focused interest on embodied time perception i.e. the influence of affective and body states on time judgments Moreover the present Research Topic seeks to gather papers discussing the key role of time on different aspects of robotic cognition as well as modeling approaches We are interested in paving the way for a new generation of intelligent computational systems that incorporate the sense of time in their processing loop and thus accomplish more
