Neurobiology of human language and its evolution: Primate and Nonprimate Perspectives Constance Scharff, Angela D. Friederici, Michael Petrides, The evolution of human language has been discussed for centuries from different perspectives Linguistic theory has proposed grammar as a core part of human language that has to be considered in this context Recent advances in neurosciences have allowed us to take a new neurobiological look on the similarities and dissimilarities of cognitive capacities and their neural basis across both closely and distantly related species A couple of decades ago the comparisons were mainly drawn between human and non human primates investigating the cytoarchitecture of particular brain areas and their structural connectivity Moreover comparative studies were conducted with respect to their ability to process grammars of different complexity So far the available data suggest that non human primates are able to learn simple probabilistic grammars but not hierarchically structured complex grammars The human brain which easily learns both grammars differs from the non human brain among others in how two language relevant brain regions Broca s area and superior temporal cortex are connected structurally Whether the more dominant dorsal pathway in humans compared to non human primates is causally related to this behavioral difference is an issue of current debate Ontogenetic findings suggest at least a correlation between the maturation of the dorsal pathway and the behavior to process syntactically complex structures although a causal prove is still not available Thus the neural basis of complex grammar processing in humans remains to be defined More recently it has been reported that songbirds are also able to distinguish between sound sequences reflecting complex grammar Interestingly songbirds learn to sing by imitating adult song in a process not unlike language development in children Moreover the neural circuits supporting this behavior in songbirds bear anatomical and functional similarities to those in humans In adult humans the fiber tract connecting the auditory cortex and motor cortex dorsally is known to be involved in the repetition of spoken language This pathway is present already at birth and is taken to play a major role during language acquisition In songbirds detailed information exist concerning the interaction of auditory motor and cortical basal ganglia processing during song learning and present a rich substrate for comparative studies The scope of the Research Topic is to bring together contributions of researchers from different fields who investigate grammar processing in humans non human primates and songbirds with the aim to find answers to the question of what constitutes the neurobiological basis of grammar learning Open questions are Which brain networks are relevant for grammar learning Is there more than one dorsal pathway one from temporal cortex to motor cortex and one to Broca s area and if so what are their functions Has the ability to process

sequences of a given hierarchical complexity evolved in different phylogenetic lines birds primates other vocal production learners such as bats Is the presence of a sensory to motor circuit in humans a precondition for development of a dorsal pathway between the temporal cortex and Broca's area What role do subcortical structures Basal Ganglia play in vocal and grammar learning The Contemporary Evolution of Religious Thought in England, America and India comte Eugène Goblet d'Alviella,1886 **Astronomy** Alton Biggs,2002 Cooperation and Its Evolution Kim Sterelny,Richard Joyce,Brett Calcott,Ben Fraser,2024-08-06 Essays from a range of disciplinary perspectives show the central role that cooperation plays in structuring our world This collection reports on the latest research on an increasingly pivotal issue for evolutionary biology cooperation The chapters are written from a variety of disciplinary perspectives and utilize research tools that range from empirical survey to conceptual modeling reflecting the rich diversity of work in the field They explore a wide taxonomic range concentrating on bacteria social insects and especially humans Part I Agents and Environments investigates the connections of social cooperation in social organizations to the conditions that make cooperation profitable and stable focusing on the interactions of agent population and environment Part II Agents and Mechanisms focuses on how proximate mechanisms emerge and operate in the evolutionary process and how they shape evolutionary trajectories Throughout the book certain themes emerge that demonstrate the ubiquity of questions regarding cooperation in evolutionary biology the generation and division of the profits of cooperation transitions in individuality levels of selection from gene to organism and the human cooperation explosion that makes our own social behavior particularly puzzling from an evolutionary perspective Bradford Books imprint **The Cosmic Frontier** Barrett Williams,ChatGPT,2025-01-10 The Cosmic Frontier Unlocking the Mysteries of the Universe with AI Embark on an exhilarating journey through the cosmos where technology meets the stars with The Cosmic Frontier This groundbreaking eBook pushes the boundaries of traditional astronomy by harnessing the power of artificial intelligence to delve into the awe inspiring universe lying just beyond our reach Explore New Worlds with AI With AI as your guide venture into the realm of exoplanets Discover the fascinating process of hunting for these distant worlds and learn how cutting edge algorithms assist in identifying those with potential for habitability From early discoveries to the defining characteristics of these alien planets you ll gain a newfound appreciation for the celestial AI at the Helm of Discovery Dive into chapters dedicated to AI driven techniques that revolutionize exoplanet discovery showcasing how machine learning and data analysis transform raw signals into groundbreaking insights Real world case studies illustrate how AI has successfully advanced our understanding of the cosmos Deciphering the Signs of Life Imagine the potential of AI in seeking extraterrestrial life Uncover how advanced algorithms define biosignatures and simulate scenarios of contact offering a captivating glimpse into the future of cosmic exploration The Synergy of Man and Machine Delve into the collaborative power of human expertise and AI blending intuition with precision Discover how this partnership extends beyond space influencing technology and inspiring future generations of explorers Tomorrow's Technology Today Peer into
