Wildfire Code Red:

WILDFIRE AND COMMUNITY Douglas Paton, Fantina Tedim, 2012 Wildfires represent a growing threat to environments to people communities and to societies worldwide particularly in the United States Southern Europe and Australia Recognition of this growing risk has highlighted a need to develop people s capacity to adapt to annually occurring events that could increase in frequency and severity over the coming years and decades The goal of ensuring sustained levels of protective measures in communities susceptible to wildfire hazard consequences has proved to be elusive This book examines why this is so and identifies ways in which sustained levels of preparedness can be facilitated Major topics include wildfire preparedness and resiliency in community contexts socially disastrous landscape fires in southeastern Australia landscape typology of residential wildfire risk proactive human response to wildfires outbreak forest fires in wildland urban interface wildfire risk management stay or go policy in the line of fire social dimensions of forest fire the influence of community diversity evaluating a community engagement initiative response to fire threats social media and resiliency and building on lessons learned Additional information includes the landscape fires in southeastern Australia wildfire risk management in Portugal fire preparedness in Greece Cyprus and the Pine Barrens in the northeastern United States The findings of research programs being conducted in the United States Australia Europe India and South America are presented The book includes case studies on the analysis and proposed actions of the wildland urban interface being faced by Central Chile and South America This book will provide a comprehensive and systematic review of the wildfire preparedness research and its application to the development of risk communications and public education programs Firestorm Edward Struzik, 2017-10-05 Frightening Firestorm comes alive when Struzik discusses the work of offbeat scientists New York Times Book Review Comprehensive and compelling Booklist A powerful message Kirkus Should be required reading Library Journal For two months in the spring of 2016 the world watched as wildfire ravaged the Canadian town of Fort McMurray Firefighters named the fire the Beast It acted like a mythical animal alive with destructive energy and they hoped never to see anything like it again Yet it s not a stretch to imagine we will all soon live in a world in which fires like the Beast are commonplace A glance at international headlines shows a remarkable increase in higher temperatures stronger winds and drier lands a trifecta for igniting wildfires like we ve rarely seen before This change is particularly noticeable in the northern forests of the United States and Canada These forests require fire to maintain healthy ecosystems but as the human population grows and as changes in climate animal and insect species and disease cause further destabilization wildfires have turned into a potentially uncontrollable threat to human lives and livelihoods Our understanding of the role fire plays in healthy forests has come a long way in the past century Despite this we are not prepared to deal with an escalation of fire during periods of intense drought and shorter winters earlier springs potentially more lightning strikes and hotter summers There is too much fuel on the ground too many people and assets to protect and no plan in place to deal with these

challenges In Firestorm journalist Edward Struzik visits scorched earth from Alaska to Maine and introduces the scientists firefighters and resource managers making the case for a radically different approach to managing wildfire in the 21st century Wildfires can no longer be treated as avoidable events because the risk and dangers are becoming too great and costly Struzik weaves a heart pumping narrative of science economics politics and human determination and points to the ways that we and the wilder inhabitants of the forests around our cities and towns might yet flourish in an age of growing megafires

Wildland Fire in Ecosystems ,2000

Global Burning Eve Darian-Smith,2022-04-19 How extreme right antidemocratic governments around the world are prioritizing profits over citizens stoking catastrophic wildfires and accelerating global climate change Recent years have seen out of control wildfires rage across remote Brazilian rainforests densely populated California coastlines and major cities in Australia What connects these separate events is more than immediate devastation and human loss of life In *Global Burning* Eve Darian Smith contends that using fire as a symbolic and literal thread connecting different places around the world allows us to better understand the parallel and related trends of the growth of authoritarian politics and climate crises and

their interconnected global consequences Darian Smith looks deeply into each of these three cases of catastrophic wildfires and finds key similarities in all of them As political leaders and big business work together in the pursuit of profits and power anti environmentalism has become an essential political tool enabling the rise of extreme right governments and energizing their populist supporters These are the governments that deny climate science reject environmental protection laws and foster exclusionary worldviews that exacerbate climate injustice The fires in Australia Brazil and the United States demand acknowledgment of the global systems of inequality that undergird them connecting the political erosion of liberal democracy with the corrosion of the environment Darian Smith argues that these wildfires are closely linked through capitalism colonialism industrialization and resource extraction In thinking through wildfires as environmental and political phenomenon Global Burning challenges readers to confront the interlocking powers that are ensuring our future ecological collapse

The Path of Flames Ashley Kendell,Alison Galloway,Colleen Milligan,2023-10-30 The Path of Flames Understanding and

Responding to Fatal Wildfires is an edited volume covering the complexities of response and recovery issues relative to catastrophic wildfires. As wildfires become more frequent throughout the world and the loss of life greater especially among residents trapped in the path of the flames, it is essential that agencies in fire-prone areas understand the complexity of the response as it relates to finding and identifying the remains of those who perished. While covering wildfire dynamics, risks for vulnerable populations, and the emergency response to wildfires, this book focuses largely on the recovery of human remains within the context of the overall response to mass disasters resulting from wildfires. As such, search protocols, staffing needs, pre-event coordination and organization, and logistical support are addressed. The scientific basis for understanding how fire will affect human remains, as well as how the level of destruction can be interpreted, is also addressed. Recognizing the multidisciplinary nature of the field, this volume covers forensic issues relating to the recovery of remains: forensic anthropology, DNA analysis, forensic odontology, and forensic pathology. The book also includes contributions from international wildfire response professionals looking at global best practices in wildfire response and human remains recovery. Specifically, several chapters cover the lessons learned from the devastating Camp Fire of 2018 in California that led to the deaths of 85 people. The Camp Fire burned nearly 19,000 structures and was ultimately the most destructive and deadly in California's history. *The Path of Flames* is a one-of-a-kind reference that serves as a valuable resource for professionals working in the areas of emergency services, search and rescue, law enforcement, fire service, disaster planning, and response, victim recovery and identification, and mass disaster and mass fatality response.

The Summer Canada Burned Monica Zurowski, Postmedia, 2023-11-28. With over one hundred full-color photographs comes a harrowing portrait of Canada's most devastating wildfire season ever, the effects of which could be felt and seen across the world. All hell has broken loose. That's the phrase some fire officials use to describe the unprecedented 2023 wildfire season in Canada. Never before has the vast and rugged beauty of this country been ravaged by as many devastating wildfires. Never before have the fires been this big or moved this fast. Choking smoke blanketed the continent, including the United States, putting millions of people under air quality advisories and even traveled as far as Norway. The wildfire season started in the spring with most provinces and territories facing a drought. In early May, many parts of Canada grappled with a record-breaking number of fires. By the end of August, wildfires had devoured more than 15 million hectares (37 million acres) of Canadian forest, more than six times the

average usually lost to fire Provinces such as British Columbia and Nova Scotia experienced their largest wildfires ever Quebec Alberta Saskatchewan and Northwest Territories battled their most destructive wildfires ever Tens of thousands of Canadians from coast to coast to coast were chased from their homes by flames or the threat of flames seeking shelter in evacuation centers across the country People from Halifax Yellowknife Kelowna Shuswap and many other communities survived harrowing escapes along flame lined roads with embers raining down upon them Thousands of firefighters from Canada and around the world risked their lives to battle the blazes which already numbered almost 6 000 by the end of August Four firefighters lost their lives doing so The Summer Canada Burned tells the dramatic story of Canada s wildfires in 2023 a story that provides a case study of the changing climate and its impacts on our environment It reflects evolving attitudes about approaches to wildfires and the role all people can play in prevention Most importantly however the story of Canada s wildfires is a story of loss and of survival From the ashes people rise communities rebuild and seeds of new growth sprout A share of the sales from the book will be donated to the Canadian Red Cross
