Abstract: The purpose of this activity is to introduce high school freshmen to the scientific method and report writing through the design, implementation, and analysis of a semester-long experiment. The students were responsible for designing a research project on sap production in maple trees beginning with the formation of a research question and ending with a full research report written in standard scientific format.

Grade level: 9th (Botany)

Objectives: 1) Introduce students to the scientific method, 2) give student real-life experience designing and analyzing a research project, 3) use a local resource (woodlot) for place-based learning, and 4) provide students with practice writing a scientific report.

National Standards: Understanding of:

- * Scientific inquiry
- * Natural resources

Research Methodology D K Bhattacharyya, 2006-12 For defining research problems and finding their appropriate solutions you need to follow a structured approach A logical series of steps need to be performed right from selecting a topic of research to report writing Every finding needs to be strengthened by arguments which are adequately substantiated by data Research in management areas needs massive experimentation and data support Management research requires more theoretical rigours and practical insights However not much of the available reading material provides extensive focus on management research Yet students are required to comprehend the nitty gritty of doing research right from developing their project reports to final dissertation as part of their core curriculum This book is well equipped with fundamentals of research and research designs Written in a simple language it covers all facets of management areas with details of statistical tools required for analysis in a research work Many practical examples and tips for management researchers strengthen the content of this book It is an essential reading for management students as well as for those who are aspiring to do their doctoral work in management It conforms to the core syllabus of all universities and institutes

Exploring the Scientific Method Steven Gimbel, 2011-05-01 From their grade school classrooms forward students of science are encouraged to memorize and adhere to the scientific method a model of inquiry consisting of five to seven neatly laid out steps often in the form of a flowchart But walk into the office of a theoretical physicist or the laboratory of a biochemist and ask Which step are you on and you will likely receive a blank stare This is not how science works But science

does work and here award winning teacher and scholar Steven Gimbel provides students the tools to answer for themselves this question What actually is the scientific method Exploring the Scientific Method pairs classic and contemporary readings in the philosophy of science with milestones in scientific discovery to illustrate the foundational issues underlying scientific methodology Students are asked to select one of nine possible fields astronomy physics chemistry genetics evolutionary biology psychology sociology economics or geology and through carefully crafted case studies trace its historical progression all while evaluating whether scientific practice in each case reflects the methodological claims of the philosophers This approach allows students to see the philosophy of science in action and to determine for themselves what scientists do and how they ought to do it Exploring the Scientific Method will be a welcome resource to introductory science courses and all courses in the history and philosophy of science
