Handbook of Research on Fair Trade Laura T. Raynolds, Elizabeth A. Bennett, 2015-02-27 Fair trade critiques the historical inequalities inherent in international trade and seeks to promote social justice by creating alternative networks linking marginalized producers typically in the global South with progressive consumers typically in the global North. *From West to East: Recent Advances in Psychometrics and Psychological Instruments in Asia* Mengcheng Wang, Yiyun Shou, Joseph Wu, Hui-Fang Chen, Cheng-Ta Yang, Kazuhisa Takemura, 2022-03-03

Advanced Methodologies and Technologies in Modern Education Delivery Khosrow-Pour, D.B.A., Mehdi, 2018-09-21 Recent innovations and new technologies in education have altered the way teachers approach instruction and learning and can provide countless advantages. The pedagogical value of specific technology tools and the cumulative effects of technology exposure on student learning over time are two areas that need to be explored to better determine the improvements needed in the modern classroom. *Advanced Methodologies and Technologies in Modern Education Delivery* provides emerging research on educational models in the continually improving classroom. While highlighting the challenges facing modern in-service and pre-service teachers when educating students, readers will learn information on new methods in curriculum development, instructional design, and learning assessments to implement within their classrooms. This book is a vital resource for pre-service and in-service teachers, teacher education professionals, higher education administrative professionals, and researchers interested in new curriculum development.

Theorizing Teaching and Learning in Asia and Europe John Chi-Kin Lee, Kerry J. Kennedy, 2017-03-27 There has been much debate in recent times between the Anglo-American tradition of curriculum studies and the Continental and North European tradition of didactics. As important as such debate has been, this book seeks to add new voices to the debate, representing ideas and traditions from a different part of the world. The focus is on Chinese curriculum thinking that has passed through a number of stages and currently represents a blend of some aspects of the American tradition and Chinese cultural traditions. How does Chinese thinking about curriculum teaching and learning resonate with European didactic traditions, and what are the implications for theorizing an expanded field of curriculum studies? This book deliberately transcends borders and cultures to explore new territory, to provide a platform for open dialogue, and to open up new areas of investigation. Chapters include: Curriculum Reform and Research in China: A Social Historical Perspective; What Mathematics Did Teachers Learn: Comparison of the School and the Pre-Service Teacher Mathematics Curricula in Germany and Taiwan; Living in Parallel Worlds: A Transatlantic Dialogue between General Didactics and Instructional Design. *Monthly Catalogue, United States Public Documents*, 1985-05

Bioactive Compounds from Microbes Roberto Mazzoli, Katharina Riedel, Enrica Pessione, 2017-06-02 Microorganisms have had a long and surprising history. They were invisible until invention of the microscope in the 17th century. Until that date, although they were extensively but unconsciously employed in food preservation (beer and wine fermentation, cheese, vinegar, yogurt, and bread making) as well as being the causative agents of

infectious diseases they were considered as not existing The work of Pasteur in the middle of the 19th century revealed several biological activities performed by microorganisms including fermentations and pathogenicity Due to the urgent issue to treat infectious diseases the main cause of death at those times the positive potential of the microbial world has been neglected for about one century Once the fight against the evil strains was fulfilled also thanks to the antibiotics industry began to appreciate bacteria s beneficial characteristics and exploit selected strains as starters for both food fermentations and aroma enzyme and texturing agent production However it was only at the end of the 20th century that the probiotic potential of some bacteria such as lactic acid bacteria and bifidobacteria was fully recognized Very recently apart from the probiotic activity of in toto bacteria attention has begun to be directed to the chemical mediators of the probiotic effect Thanks also to the improvement of techniques such as transcriptomics proteomics and metabolomics several bioactive compounds are continuously being discovered Bioactive molecules produced by bacteria yeasts and virus infected cells proved to be important for improving or impairing human health The most important result of last years research concerns the discovery that a very complex network of signals allows communication between organisms from intra species interactions to inter kingdom signaling Based on these findings a completely new approach has arisen the system biology standpoint Actually the different organisms colonizing a certain environmental niche are not merely interacting with each other as individuals but should be considered as a whole complex ecosystem continuously exchanging information at the molecular level In this context this topic issue explores both antagonistic compounds i e antibiotics and multiple function cooperative molecules improving the physiological status of both stimulators and targets of this network From the applicative viewpoint these molecules could be hopefully exploited to develop new pharmaceuticals and or nutraceuticals for improving human health
