Education Policy Outlook 2019 Working Together to Help Students Achieve their Potential OECD,2019-09-16
Taking the perspective of institutions and the system Education Policy Outlook 2019 Working Together to Help Students Achieve their Potential analyses the evolution of key education priorities and key education policies in 43 education systems It compares more recent developments in education policy ecosystems mainly between 2015 and 2019 with various education policies adopted between 2008 and 2014

Effects of integrated learning: explicating a mathematical concept in inquiry-based science camps Louise Bindel,2018 Although various arguments for integrated learning of mathematics and science exist empirical evidence that integrated learning is as beneficial as anticipated is limited Therefore this quasi experimental study investigates the effect of integrated learning of mathematics and science on eight student variables by comparing it to a control group Results show that integrated learning is no miracle cure but has positive and negative effects on specific student outcomes Whereas integrated learning effects students view of the relation between mathematics and science positively it effects students scientific self concept negatively Thus integrated learning should not substitute but rather complement disciplinary learning Obwohl zahlreiche Argumente für das integrierte Lernen von Mathematik und Naturwissenschaften existieren ist die vorteilhafte Wirkung integrierten Lernens begrenzt empirisch belegt Im Rahmen dieser quasi experimentellen Studie wird der Effekt integrierten Lernens auf acht Sch lervariablen durch Vergleiche mit einer Kontrollgruppe untersucht Die Ergebnisse zeigen dass integriertes Lernen kein Allheilmittel ist sondern positive und negative Effekte auf bestimmte Sch lervariablen hat Während integriertes Lernen die Sicht der Sch lerinnen und Sch ler auf die Beziehung zwischen Mathematik und Naturwissenschaften positiv beeinflusst hat es einen negativen Effekt auf das naturwissenschaftliche Selbstkonzept Daher sollte integriertes Lernen nicht stellvertretend sondern ergänzend zu disziplin rem Lernen implementiert werden

Developing the Higher Education Curriculum Brent Carnell,Dilly Fung,2017-11-13 A complementary volume to Dilly Fung s A Connected Curriculum for Higher Education 2017 this book explores research based education as applied in practice within the higher education sector A collection of 15 chapters followed by illustrative vignettes it showcases approaches to engaging students actively with research and enquiry across disciplines It begins with one institution s creative approach to research based education UCL s Connected Curriculum a conceptual framework for integrating research based education into all taught programmes of study and branches out to show how aspects of the framework can apply to practice across a variety of institutions in a range of national settings The 15 chapters are provided by a diverse range of authors who all explore research based education in their own way Some chapters are firmly based in a subject discipline including art history biochemistry education engineering fashion and design healthcare and veterinary sciences while others reach across geopolitical regions such as Australia Canada China England Scotland and South Africa The final chapter offers 12 short vignettes of practice to highlight how engaging students with research and enquiry can enrich their learning experiences preparing them not only for more advanced academic learning but also for professional roles in complex rapidly changing social contexts

Active Learning in College Science Joel J. Mintzes,Emily M. Walter,2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction

through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naïve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for
