General principles when taking measurements

- Write down the number of DP that is given by your measuring devices. For example, do not write "11 cm", write "11.0" cm when using a ruler.
- Write all subsequent measurements with the same number of DP
- The exception to this is when using a stopwatch – 1 dp at best due to human reaction time
- If you are using a digital meter with a varying value – be sensible.
 - If the meter changes between two values (e.g. 5.39 V and 5.40 V), use the higher.
 - If it changes between three values, choose the middle.
 - Remember, though, that the examiners will not be able to check!

Q1. This is an experiment that should run fairly simply. Begin by setting up the apparatus and taking and recording a measurement.

- a) Taking a measurement of a dependent variable – you will usually be told that it should be set to roughly a specific value.
Marks will not be awarded if your measurement is not very close to this!!
If it tells you "roughly 25.0 cm" – then I guess 25.2 cm is ok. But **just do 25.0 cm** or as close as you can.
- b) Taking a measurement of an independent variable
 - Use an appropriate number of SF/DP – this step will often be a distance, so use the DP available on your measuring device. For time, 1 DP is appropriate
 - Evidence of repeats – take repeat values and find an average. Show your calculations as evidence or not credit will be given
 - If you are finding a time period of an oscillation, you can take multiple (n) oscillations, and divide your total time by n .
- c) Table: general marks criteria
 - 4 marks for taking six readings with a correct trend
 - 1 mark for using a wide enough range (often this range will be given in the question). Usually at least 60% of the total range that you could measure
 - 1 mark for correct column headings **with correct units for all!**
 - 1 mark for being consistent with your DP of your independent variable – for each column use the same number of DP

SemipaiatinskJAltai Case Studies The estimated exposures to large numbers of people in the Altai lie in an important dose rate and dose domain Hence the research reported herein provides new and unique information on the effects of radiation on humans Also emphasized at the ARW were studies involving fallout from the Pacific Island tests of the U S A There have been over 2300 nuclear weapon test explosions to date More than 500 took place in the atmosphere and outer space the remainder were underground The atmospheric tests comprise the largest source of anthropogenic radioactivity released into the earth s atmosphere to date The vast majority in number and yield were carried out by the former Soviet Union FSU and the United States Each superpower maintained two primary test sites one continental primarily for small yield tests and the other more remote for larger yield tests For the U S A Physics of the Inner Heliosphere II Rainer Schwenn,Eckart

research field where high expectations have met with recurrent frustration It is a common perception among physicists mathematicians and engineers that there is a big mystery behind the phenomenon of turbulence Its history has also remained anything but well researched Unlike topics such as quantum theory which began to attract physics historians as long as fifty

years ago turbulence has until now received only little professional historical investigation In this book which complements his earlier SpringerBrief *The Turbulence Problem* the author sketches the history of turbulence from the vantage point of its roots Part I the basic concepts Part II and the formation of a scientific community that regarded turbulence as a research field in its own right Part III From this perspective turbulence research appears to undertake an odyssey through uncharted territories The book follows this development up until a conference in Marseille in the year 1961 which marked the inauguration of turbulence in the words of its organizer as a new science The epilogue contains some observations about turbulence research since 1961 This book provides a rich source of information for all those interested in the history of this major field of basic and applied science *Literature 1992, Part 1* Astronomisches Recheninstitut, 2013-11-11 Astronomy and Astrophysics Abstracts appearing twice a year has become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world

 semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications
 throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution
 adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive
 documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average
 time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight
 months This time interval is near to that achieved by monthly abstracting journals compared to which our system of
 accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 18 contains
 literature published in 1976 and received before March 1 1977 some older literature which was received late and which is
