discipline that may now be called Computational Materials. This area has become sufficiently diverse that any attempt to cover all the pertinent topics would be futile. Even with a limited scope the present undertaking has required the dedicated efforts of 13 Subject Editors to set the scope of nine chapters, solicit authors and collect the manuscripts. The contributors were asked to target students and non-specialists as the primary audience to provide an accessible entry into the field and to offer references for further reading. With no precedents to follow the editors and authors were only guided by a common goal to produce a volume that would set a standard toward defining the broad community and stimulating its growth. The idea of a reference work on materials modeling surfaced in conversations with Peter Binfield, then the Reference Works Editor at Kluwer Academic Publishers in the spring of 1999. The rationale at the time already seemed quite clear: the field of computational materials research was taking off; powerful computer capabilities were becoming increasingly available; and many sectors of the scientific community were getting involved in the enterprise.
