

### Molality, *continued* ▼

- The molality of any solution can be calculated by dividing the number of moles of solute by the number of kilograms of solvent: ▼

$$\text{molality } (m) = \frac{\text{amount of solute (mol)}}{\text{mass of solvent (kg)}} \quad \blacktriangledown$$

- Unlike molarity, which is a ratio of which the denominator is liters of *solution*, molality is per *kilograms of solvent*. ▼
  - Molality is used when studying properties of solutions related to vapor pressure and temperature changes, because molality does not change with temperature.
