Unit 1 Photosynthesis and the carbon cycle

Topic 1.1 Photosynthesis

Exercise 1.1A How light level affects photosynthesis

- 1 The type of plant; the mass of the plant; the temperature

2

Apparatus	Amount of light	Volume of gas collected in cm ³
A	high	18.3
B	low	7.2
C	none	0.5

- 3 Plants photosynthesise faster when they have more light.

Exercise 1.1B The effect of different colours of light on the rate of photosynthesis

- 1 The colour of the light / cellophane.
 2 The number of bubbles produced in one minute.
 3 Any three from: the light intensity (strength); the type of water the water plant was in; the quantity of water plant; the type of water plant; the temperature.
 4 For example:

Colour of light	Number of bubbles per minute			
	1st try	2nd try	3rd try	mean
white	11	13	12	12
red	10	12	11	11
green	4	5	6	5
blue	8	12	10	10

5

- 6 Accept any valid conclusion that can be made from these results, for example: plants photosynthesise fastest in white light; photosynthesis happens faster in blue light than in green light.

Exercise 1.1C Turning an idea into a hypothesis that can be tested

- 1 Accept any answer that:
- is in the form of a clearly phrased hypothesis
 - relates to the effect of carbon dioxide on the rate of photosynthesis of an aquatic plant
 - can be tested by experiment.

For example, a possible hypothesis could be: Water plants give off more bubbles per minute when they are given more carbon dioxide.

- 2 Look for:
- a clear statement of the independent variable and dependent variable
 - at least two other variables that will be controlled
 - a clearly explained method, with enough detail that someone else could follow it, including a labelled diagram of the apparatus
 - a clear description of how the independent variable will be changed
 - a clear description of how and when results will be collected
 - a results chart, with headings and units (but no results)
 - a prediction based on scientific understanding.

How Science Works Rob Toplis, 2010-12-02 *How Science Works* provides student and practising teachers with a comprehensive introduction to one of the most dramatic changes to the secondary science curriculum. Underpinned by the latest research in the field, it explores the emergence and meaning of *How Science Works* and reviews major developments in pedagogy and practice. With chapters structured around three key themes: why *How Science Works*, what it is, and how to teach it, expert contributors explore issues including the need for curriculum change, arguments for scientific literacy for all school students, views about science, what we understand about scientific methods, types of scientific enquiry, and importantly, effective pedagogies and their implications for practice. Aiming to promote discussion and reflection on the way forward for this new and emerging area of the school science curriculum, it considers teaching controversial issues in science, argumentation and questioning for effective teaching, enhancing investigative science, and developing reasoned scientific judgments, the role of ICT in exploring *How Science Works*, teaching science outside the classroom. *How Science Works* is a source of guidance for all student new and experienced teachers of secondary science interested in investigating how the curriculum can provide creativity and engagement for all school students. **How Science Works** James D.

Williams, 2011-04-21 **Science & Engineering Indicators**, 2006 **Teacher's Assessment Book**, 2003 New Star Science contains flexible unit packs from Foundation through to Year 6 with all the resources you need to teach Primary Science as you choose or in line with the QCA Scheme of Work. And with new Assessing Pupils Progress support and BBC Active software, it's the most comprehensive yet flexible science resource in the UK. *The Historiography of Contemporary Science, Technology, and Medicine* Ronald E. Doel, Thomas Söderqvist, 2006-10-02 Bringing together authorities on the history, historiography, and methodology of recent and contemporary science, this book reviews the problems facing historians of technology, contemporary science, and medicine and explores new ways forward. Theory and Reality Peter Godfrey-Smith, 2021-07-16 How does science work? Does it tell us what the world is really like? What makes it different from other ways of understanding the universe? In *Theory and Reality*, Peter Godfrey-Smith addresses these questions by taking the reader on a grand tour of more than a hundred years of debate about science. The result is a completely accessible introduction to the main themes of the philosophy of science. Examples and asides engage the beginning student; a glossary of terms explains key concepts and suggestions for further reading are included at the end of each chapter. Like no other text in this field, *Theory and Reality* combines a survey of recent history of the philosophy of science with current key debates that any beginning scholar or critical reader can follow. The second edition is thoroughly updated and expanded by the author with a new chapter on truth, simplicity, and models in science. Climate Change Biology, 2011 Climate change has moved from being a contested phenomenon to the top of the agenda at global summits. *Climate Change Biology* is the first major textbook to address the critical issue of how climate change may affect life on the planet and particularly its impact on

human populations Presented in four parts the first deals extensively with the physical evidence of climate change and various modelling efforts to predict its future Biological responses are addressed in the second part from the individual s physiology to populations and ecosystems and further to considering adaptation and evolution The third part examines the specific impact climate change may have on natural resources agriculture and forestry The final part considers research on the cutting edge of impact prediction and the practical and philosophical limitations on our abilities to predict these impacts This text will be a useful asset to the growing number of both undergraduate and graduate courses on impacts of climate change as well as providing a succinct overview for researchers new to the field Making Ammonia Benjamin Johnson,2022-05-10 This Open Access book discusses the progress of science and the transfer of scientific knowledge to technological application It also identifies the factors necessary to achieve this progress Based on a case study of the physical chemist Fritz Haber s discovery of ammonia synthesis between 1903 and 1909 the book places Haber s work in historical and scientific physicochemical context The scientific developments of the preceding century are framed in a way that emphasizes the confluence of knowledge needed for Haber s success Against this background Haber s work is presented in detail along with the indispensable contributions of his colleague the physical chemist Walter Nernst and their assistants The detailed accounts of scientific advancement remind us of the physical basis on which our scientific theories and ideas are built Without this reminder we often forget how complex and how beautiful achievements in science can be *Chasing Science at Sea* Ellen Prager,2009-05-15 To the average office dweller marine scientists seem to have the good life cruising at sea for weeks at a time swimming in warm coastal waters living in tropical paradises But ocean scientists who go to sea will tell you that it is no vacation Creature comforts are few and the obstacles seemingly insurmountable yet an abundance of wonder and discovery still awaits those who take to the ocean *Chasing Science at Sea* immerses readers in the world of those who regularly go to sea aquanauts living underwater marine biologists seeking unseen life in the deep ocean and the tall ship captains at the helm among others and tells the fascinating tale of what life and science is like at the mercy of Mother Nature With passion and wit well known marine scientist Ellen Prager shares her stories as well as those of her colleagues revealing that in the field ingenuity and a good sense of humor are as essential as water sunblock and GPS Serendipity is invaluable and while collecting data is the goal sometimes just getting back to shore means success But despite the physical hardship and emotional duress that come with the work optimism and adventure prompt a particularly hardy species of scientist to return again and again to the sea Filled with firsthand accounts of the challenges and triumphs of dealing with the extreme forces of nature and the unpredictable world of the ocean *Chasing Science at Sea* is a unique glimpse below the water line at what it is like and why it is important to study explore and spend time in one of our planet s most fascinating and foreign environments Lucid Waking: The Answer to the Problem of Consciousness Jack Tanner,2021-07-27 There is no problem more baffling to the academic world than the problem of consciousness It s fair to say that no academic has any clue at all

about what consciousness is In fact academics have totally confused it with something radically different namely sentience The problem that faces the academic world is the insurmountable one of how you get lifeless mindless purposeless objects material atoms to manifest subjectivity It s a category error to imagine that matter can provide any answers to the foundational issues of mind Academics believe that to answer the problem of subjectivity is thereby to solve the hard problem of consciousness In fact the problem of subjectivity sentience is totally different from the problem of consciousness To understand why simply ponder all of the following statements 1 animals are sentient but not conscious 2 human babies are sentient but not conscious 3 humans who never encountered another human are sentient but not conscious 4 sleepwalking humans are sentient but not conscious The problem of sentience is drastically different from the problem of consciousness and if you conflate the two you have immediately set yourself an impossible task especially if you make any attempt to solve these problems within the framework of materialism i e the ideology of anti mind To understand what consciousness actually is it s essential to understand the difference in the world of sleep between dreaming and lucid dreaming Exactly the same dichotomy is present in the waking world A sleepwalker is a person who can do complex tasks such as riding a motorbike for half an hour without any consciousness A conscious version of a sleepwalker engages in what we refer to as lucid waking Lucid waking is the key to consciousness The fact is that consciousness is not an inherent property of human individuals It s not built into them It s acquired just as some people acquire the ability to become lucid dreamers Since sleepwalkers could do many of the same things as conscious individuals the question is invited of why consciousness is required at all If you don t know what consciousness is how can you expand your consciousness to the maximum Wouldn t you like to be maximally conscious Think of the power you would have *Outlines of Theoretical Chemistry* Lothar Meyer,1892 **National Science Policy Study, Parts I-VII** United States. Congress. House. Committee on Science,1998 Science and Public Policy United States. President's Scientific Research Board,John Roy Steelman,1947 *Science Makes the World Go Round* Michael Böcher,Max Krott,2016-06-17 Researchers in the environmental sciences are often frustrated because actors involved with practice do not follow their advice This is the starting point of this book which describes a new model for scientific knowledge transfer called RIU for Research Integration and Utilization This model sees the factors needed for knowledge transfer as being state of the art research and the effective practical utilization to which it leads and it highlights the importance of integration which in this context means the active bi directional selection of those research results that are relevant for practice In addition the model underscores the importance of special allies who are powerful actors that support the application of scientific research results in society An important product of this approach is a checklist of factors for successful knowledge transfer that will be useful for scientists By using this checklist research projects and research programs can be optimised with regard to their potential for reaching successful knowledge transfer effects Science and Public Policy ...: A program for the nation United States. Engaging Science Joseph Rouse, 2018-10-18 Summarizing this century's major debates over realism and the rationality of scientific knowledge Joseph Rouse believes that these disputes oversimplify the political and cultural significance of the sciences He provides an alternative understanding of science that focuses on practices rather than knowledge Rouse first outlines the shared assumptions by ostensibly opposed interpretive stances toward science scientific realism social constructivism empiricism and postempiricist historical rationalism He then advances cultural studies as an alternative approach one that understands the sciences as ongoing patterns of situated activity whose material setting is part of practice Cultural studies of science the author suggests take seriously their own participation in and engagement with the culture of science rejecting the purported detachment of earlier philosophical or sociological standpoints Rather such studies offer specific critical discussions of how and why science matters and to whom and how opportunities for meaningful understanding and action are transformed by scientific practices
