Scientific Journals 2012:

Access to Scientific Research David J. Brown, 2015-11-13 The debate about access to scientific research raises questions about the current effectiveness of scholarly communication processes This book explores from an independent point of view the current state of the STM publishing market new publishing technologies and business models as well as the information habit of researchers the politics of research funders and the demand for scientific research as a public good The book also investigates the democratisation of science including how the information needs of knowledge workers outside academia can be embraced in future

Academic Journal: Editing and Publishing Radhakrishnan Nair, 2017-11-29 World University rankings were announced by Thomas Reuters and The Times As an Indian besides being one teaching for nearly five decades I was eager to know the results of the announcement I showed enough concern Where have our good Indian universities higher educational institutions been placed I set my eyes on top ranks and it didn't give me anything to be proud of My eyes crossed over more than two hundred and fifty names of universities of the world including those of some not so developed countries But I came across no name of Indian institutions universities This upsets me What made the Indian educational scenario virtually get eclipsed by the scenarios of the rest of the world I drew a comparison between the higher education in India with that of many other countries The World Education scene in general occupied a higher level of degree in research and publication than that of the Indian Education scene Research flourishes when research is brought to light through publication I always advocate sound growth in Indian Education This can be achieved if we improve journal publication This awareness has resulted in this book Therefore Journal Publishing is a Cultural Imperative This book is designed to help readers understand what a journal is the people who are responsible for the creation and production of this journal how a journal is published where a journal flourishes and why it is mandatory in education development I have taken materials from all over the world and all these sources have been acknowledged in the references but for them this book would not have been a reality

ECRM2012-Proceedings of the 11th European Conference on Research Methods Rachel McClean, 2012-01-01 Proceedings of the 11th European Conference on Research Methods in Bolton UK on 28-29 June 2011

Beyond open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre-publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of

the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e g should rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point

Beyond Bibliometrics Blaise Cronin, Cassidy R. Sugimoto, 2014-05-16 A comprehensive state of the art examination of the changing ways we measure scholarly performance and research impact

Sports, Religion and Disability Nick J. Watson, Andrew Parker, 2016-04-14 This ground breaking book provides a fascinating insight into the relationship between sports and leisure religion and disability In the shadow of the London 2012 Olympic and Paralympic Games at which athletes that were both able bodied and disabled provided an extravaganza of sporting excellence and drama this text is a timely and important synthesis of ideas that have emerged in two previously distinct areas of research i disability sport and ii the theology of disability Many of the elite athletes at this global sporting mega event often explicitly displayed their religious beliefs and in turn their importance in the context of sport by observing different religious rituals and or utilising the multi faith sports chaplaincy service This raises a whole range of unanswered questions with regard to the intersections between sports religion and disability which to date has been under researched Examples of subjects addressed in this text include elite physical disability sport Paralympics intellectual disability sport Special Olympics reflections on the illness narrative of the cyclist Lance Armstrong through the lens of the theology of radical orthodoxy the application of biblical athletic metaphors in understanding modern conceptions of disability sport the role of sport and spirituality in the rehabilitation of injured British Military personnel and the importance of sports and leisure in L Arche communities This book begins a critical conversation on these topics and many others for both researchers and practitioners This book was based on two special issues of the Journal of Religion Disability and Health

Theories of Informetrics and Scholarly Communication Cassidy R. Sugimoto, 2016-02-22 Scientometrics have become an essential element in the practice and evaluation of science and research including both the evaluation of individuals and national assessment exercises Yet researchers and practitioners in this field have lacked clear theories to guide their work As early as 1981 then doctoral student Blaise Cronin published The

need for a theory of citing a call to arms for the fledgling scientometric community to produce foundational theories upon which the work of the field could be based More than three decades later the time has come to reach out the field again and ask how they have responded to this call This book compiles the foundational theories that guide informetrics and scholarly communication research It is a much needed compilation by leading scholars in the field that gathers together the theories that guide our understanding of authorship citing and impact *Mining Scientific Papers: NLP-enhanced Bibliometrics* Iana Atanassova, Marc Bertin, Philipp Mayr, 2019-10-09 *Rethinking Scholarly Communication in China* Liu Zhongbo, 2024-09-02 This book examines science and technology policies in China over time and explores the development of scholarly communication through the lens of the political economy of communication Despite political censorship and restrictions on the production of academic knowledge in China the number of scholarly publications has skyrocketed over the past 20 years By explaining these seemingly contradictory phenomena this study provides insight into the complex landscape of scholarly communication in China shaped by the government in collaboration with commercial publishers The book examines the dynamic relationship between the state and the market including their key players which determines the production and dissemination of academic knowledge From a political economy perspective it investigates how the academic governance complex a system that intertwines communication politics and economics has been established in China It then discusses the impact of this system on the production of academic knowledge in the country The title will serve as a key reference for academics researchers and students interested in the intersection of communication studies librarianship and political science particularly those focusing on China s academic knowledge production and scholarly communication
