

Secant – Tangent Rule

If a **secant** and a **tangent** are drawn to a circle from the same external point, the product of the lengths of the **secant** and its **external segment** equals the square of the length of the **tangent segment**.

$$PA \times PB = PC^2$$

English Mechanic and Mirror of Science and Art, 1873 A *Programmed Review Of Engineering Fundamentals* Baldwin, Hess, 2013-04-17 Engineering registration is accelerating at a pace unequalled since institution of registration laws in the 1920s and 1930s. This phenomenon is not due to an easing of entrance requirements since only vestiges of grandfathering and eminence exist in most states. Nor is it due to a lessening in the difficulty of the registration examinations. In fact, it is generally agreed that the Engineering Fundamentals Examination has significantly increased in difficulty over the last fifteen years. Why then the increased interest in registration among practicing engineers? Historically, the professional engineer has been in private practice offering consulting services directly to the public. Registration laws were passed to protect the public from incompetent untrained practitioners in any engineering area. However, the registration laws go beyond establishing an individual's credentials. One reason for the new interest in engineering registration is the proliferation of new activity areas such as pollution control and energy conservation where the public is keenly aware of and insistent upon quality technological inputs.
