White, 2009 Updated and improved Stress Analysis of Fiber Reinforced Composite Materials Hyer's work remains the definitive introduction to the use of mechanics to understand stresses in composites caused by deformations loading and temperature changes In contrast to a materials science approach Hyer emphasizes the micromechanics of stress and deformation for composite material analysis The book provides invaluable analytic tools for students and engineers seeking to understand composite properties and failure limits A key feature is a series of analytic problems continuing throughout the text starting from relatively simple problems which are built up step by step with accompanying calculations The problem series uses the same material properties so the impact of the elastic and thermal expansion properties for a single layer of FR material on the stress strains elastic properties thermal expansion and failure stress of cross ply and angle ply symmetric and unsymmetric laminates can be evaluated The book shows how thermally induced stresses and strains due to curing add to or subtract from those due to applied loads Another important element and one unique to this book is an emphasis on the difference between specifying the applied loads i e force and moment results often the case in practice versus specifying strains and curvatures and determining the subsequent stresses and force and moment results This represents a fundamental distinction in solid mechanics *Handbook of Innovation in the Food and Drink Industry* Ruth Rama, 2008-03-26 Forget the idea that the food and beverage F B industry is low tech and slow changing The Handbook of Innovation in the Food and Drink Industry goes beyond the traditional perspectives by exploring neglected aspects of technological change in this industry Economic and managerial aspects of innovation technological change new product introduction and research and development are discussed by leading international specialists in the food and drink industry Food quality and society dynamic innovations the role of biotechnology and future challenges in the industry are examined clearly in detail Topics include Characteristics of production in the F B firm Managements of innovation and the effects on productivity in the F B firm Assessment of recent studies on innovation Internal and external factors of innovation at the firm level Role of the market and competition Characteristics and determinates of product innovation Productivity and innovation effects in the United States food processing industry Management of knowledge Innovations in food safety Innovations in food quality Biotechnology information and communication technology ICT and the F B industry Analysis of the transformation of the Niagara wine cluster in Canada into a regional innovation system Much more The Handbook of Innovation in the Food and Drink Industry includes a review of industry literature on innovations including the most debated topics Chapters focus on study cases analyses of large databases and other tools economic analyses and crucial survey results This is a one of a kind text that provides a well rounded view of the entire industry and where it is heading The book is carefully referenced and includes tables to clearly present data
