## *Exercise 9*

### **DIFFUSION AND OSMOSIS: PASSIVE MOVEMENT OF MOLECULES IN BIOLOGICAL SYSTEMS**

This exercise expands the definition of diffusion to include the concept of free energy. However, many students find this concept difficult to understand. They will need some help interpreting their results in terms of free energy rather than just concentration. Also important is the concept of a "model" in biological investigation. Specifically, the dialysis bag is used as a model of a cell.

If time permits, use this exercise to discuss aspects of experimentation such as hypotheses, quantification, sources of error, design of graphs, and individual versus class results.

### **SUGGESTED ELEMENTS FOR AN INTRODUCTORY LECTURE**

- Heat causes molecules to move randomly and drives diffusion.
- Brownian movement is the random movements of small particles caused by collisions with other small particles.
- Diffusion is the net movement of molecules from an area of high free energy to an area of low free energy.
- Free energy is the energy available to do work.
- Osmosis is the diffusion of water across a differentially permeable membrane.
- A solvent is a fluid that dissolves substances. A solute is a substance dissolved in a solution.
- A hypotonic solution has a salt concentration lower than the concentration of a comparable solution.
- A hypertonic solution has a salt concentration higher than the concentration of a comparable solution.

*Biology Laboratory Manual* Darrell S. Vodopich, Randy Moore, 1998-12 This laboratory manual is designed for an introductory majors biology course with a broad survey of basic laboratory techniques The experiments and procedures are simple safe easy to perform and especially appropriate for large classes Few experiments require a second class meeting to complete the procedure Each exercise includes many photographs traditional topics and experiments that help students learn about life Procedures within each exercise are numerous and discrete so that an exercise can be tailored to the needs of the students the style of the instructor and the facilities available

*Diffusion Processes and Related Topics in Biology* Luigi M. Ricciardi, 2013-03-13 These notes are based on a one quarter course given at the Department of Biophysics and Theoretical Biology of the University of Chicago in 1916 The course was directed to graduate students in the Division of Biological Sciences with interests in population biology and neurobiology Only a slight acquaintance with probability and differential equations is required of the reader Exercises are interwoven with the text to encourage the reader to play a more active role and thus facilitate his digestion of the material One aim of these notes is to provide a heuristic approach using as little mathematics as possible to certain aspects of the theory of stochastic processes that are being increasingly employed in some of the population biology and neurobiology literature While the subject may be classical the novelty here lies in the approach and point of view particularly in the applications such as the approach to the neuronal firing problem and its related diffusion approximations It is a pleasure to thank Professors Richard C Lewontin and Arnold J F Siegert for their interest and support and Mrs Angell Pasley for her excellent and careful typing I PRELIMINARIES 1 Terminology and Examples Consider an experiment specified by a the experiment's outcomes forming the space  $S$  by certain subsets of  $S$  called events and by the probabilities of these events

**Diffusion Processes** Merkel H. Jacobs, 2012-12-06 A basic tenet of present day biophysics is that flows in biological systems are causally related to forces A large and growing fraction of membrane biophysics is devoted to an exploration of the quantitative relationship between forces and flows in order to understand both the nature of biological membranes and the processes that take place on and in these membranes This is why the discussion of the nature of diffusion is so important in any formal development of membrane biophysics This was equally true twenty years ago when tracers were just beginning to be used for the measurement of  $m$

## Enjoying the Tune of Appearance: An Mental Symphony within **Vodopich Biology Manual Diffusion**

In some sort of consumed by displays and the ceaseless chatter of quick transmission, the melodic splendor and emotional symphony created by the written word usually disappear in to the background, eclipsed by the constant noise and interruptions that permeate our lives. But, located within the pages of **Vodopich Biology Manual Diffusion** a charming fictional prize filled with raw feelings, lies an immersive symphony waiting to be embraced. Crafted by a masterful composer of language, that fascinating masterpiece conducts readers on a mental trip, well unraveling the concealed melodies and profound impact resonating within each cautiously crafted phrase. Within the depths of the moving examination, we shall investigate the book is main harmonies, analyze its enthralling writing fashion, and submit ourselves to the profound resonance that echoes in the depths of readers souls.
