

EARTH 11: Volcanoes and Humans Spring 2023 Study Guide

What you should know (for the midterm):

1) Our Volcanic Planet

- a. What is a volcano? (3 definitions)
- b. Do volcanoes only occur on Earth?
- c. Are volcanoes common or rare on Earth? Are eruptions common or rare?
- d. Definition of a *potentially active* volcano
- e. Approximately how many potentially active subaerial volcanoes are on Earth?
- f. How does this number change if you include submarine volcanoes?
- g. Volcano eruption reporting vs. real changes in volcanic activity. Do you think that the number of eruptions has really increased over the past 600 years?
- h. How better communications help with eruption reporting and cataloging
- i. Where are most volcanoes found on Earth? What controls the distribution?
- j. How many potentially active volcanoes are there in the US? Compared to other nations, does the US have a lot or not very many potentially active volcanoes? Are there any potentially active volcanoes in California?
- k. Volcanic Explosivity Index (VEI). What does this scale try to measure? What are the two main factors that determine a VEI value? Appreciate that the VEI scale's dependence on volume of ejecta is logarithmic with base 10. So, roughly, a VEI 4 is ten times "bigger" than a VEI 3, a hundred times bigger than a VEI 2, and a thousand times bigger than a VEI 1.
- l. Know the approximate VEI values of the 1980 Mount St. Helens eruption, the 1883 eruption of Krakatoa, and the eruption of Yellowstone 640,000 years ago.
- m. Magnitude-frequency relationship of eruptions. What is meant by "magnitude" and "frequency" in this context? Are large eruptions more common than small eruptions, or are small eruptions more common than large eruptions?
- n. What is the age of the Earth? When did the last supercontinent Pangea break apart?
- o. Approximately how long has *Homo sapiens* existed on Earth? Approximately how long have hominins existed on Earth? (order of magnitude estimate is fine). Has our species now lasted longer than the amount of time that the (non-avian) dinosaurs roamed the Earth?
- p. What is the principle of uniformitarianism? Why is it important?
- q. Approximately what is the world human population now? Has it always been this high? What mathematical function is often used to describe population growth? Why is this relevant for volcanic hazards?
- r. Definitions of natural process, natural hazard, natural disaster, natural catastrophe, economic losses. Know what these terms mean.
- s. List 3 human factors that can exacerbate natural hazards into disasters or even catastrophes

2) Earth's internal structure and heat

- a. What is the approximate temperature of a basalt lava flow?
- b. Lava vs. magma
- c. What is the radius of the Earth?
