Conflict and Survival in Contemporary Western European Film John Alexander Williams, Alexandra Hagen, 2022-02-23 Since the turn of the twenty first century efforts to improve human rights social equality and democracy in western Europe have faced growing challenges that range from economic and medical crises to the resurgence of the tribalist far right Studying western European cinema reveals how filmmakers have been using their art to reflect on the region s contemporary problems and potentials In *Conflict and Survival in Contemporary Western*

Showcasing such movies as *Days of Glory*, *A War Code*, *Unknown*, *The Edge of Heaven*, *Toni Erdmann*, *The Great Beauty* and *Weekend*, this fascinating collection presents contemporary filmmakers as critical citizen artists who are directly involved in interrogating the past, present and future of Europe.

Luigi Moretti Roberto Podda, 2024-08-01

Luigi Moretti's *Lessons of SPAZIO* focuses on the theoretical work of the Italian architect Luigi Moretti (Rome 1906–1973). It does so selectively, focusing on the editorials he published between 1950 and 1953 as editor in chief of the magazine *SPAZIO*, as well as a further essay on parametric architecture published in 1971–1972 in the first issue of the magazine *MOEBIUS*, directed by his friend Giulio Roisecco. This book rediscovers Moretti's personal impact on international architectural theory through thoughtful comments that shed light on the architect's modernity and original approach. Although Moretti is an architect renowned for his projects and buildings, his theoretical essays are less well known. The aim of this book is therefore to explore Moretti's theoretical work, which covers many topics including pictorial art, sculpture, architecture, urban planning, music, cinema, poetry, mathematics, computer science, and parametricity. In addition to the translation from Italian to English, the book contains reproductions of the original articles, accompanied by a series of essays of critical commentary and updated interpretations that show new ways of approaching, reading, and understanding the foundations of current architectural theory and its progress over the last 50 years. This book approaches Moretti's thought from a new perspective, with the aim of reconsidering the originality of this brilliant and visionary architect, who was intellectually ostracised for many years due to political and ideological contingencies, even though he personified the ideal of the Renaissance man in modern times. A re-reading of Moretti's work is more justified today than has ever been before, both to reconnect the threads with contemporaneity and to make his intensity and farsightedness of vision known to researchers, teachers, and students working in the areas of architecture and design theory, technology, and art today.

Fourier Vision David Vernon, 2012-12-06

Fourier Vision provides a new treatment of figure-ground segmentation in scenes comprising transparent, translucent, or opaque objects. Exploiting the relative motion between figure and ground, this technique deals explicitly with the separation of additive signals and makes no assumptions about the spatial or spectral content of the images, with segmentation being carried out phase by phase in the Fourier domain. It works with several camera configurations, such as camera motion and short baseline binocular stereo, and performs best on images with small velocities/displacements, typically one to ten pixels per frame. The book also addresses the use of Fourier techniques to estimate stereo disparity and optical flow. Numerous examples are provided throughout. *Fourier Vision* will be of value to researchers in image processing, computer vision, and especially to

those who have to deal with superimposed transparent or translucent objects Researchers in application areas such as medical imaging and acoustic signal processing will also find this of interest And I Saw Sequences of Petals and Leaves Daniele C.
