Doomsday Clock stimulates solutions for a safer world The Pattern of Imperialism Tony Smith,1981-10-30 The principal

ambition of this book is to provide an avowedly eclectic although largely political explanation of American and British

imperialism as comprehensive and ultimately as unified as that offered by Marxist interpretations Geopolitical considerations

are assumed to be basic but not exclusive concerns of foreign policy elites in Britain and the United States and the ability of

people in Latin America Africa and Asia to coordinate their activities that is to act politically is assumed to be the central but

not sole feature determining the character of their response to Western imperialism The book provides profiles of various

southern political regimes and categorises their different reactions to the impact of imperialism in the nineteenth century

and to the impetus for decolonisation after 1945 The author concludes by considering the dilemma of American policy toward

the Third World in the early 1980s when traditional modes of conduct can no longer prescribe a clear plan of action

Global Trends in Eastern Europe Nikolai Genov,2016-04-22 Eastern Europe was once clearly defined by the

centralized political and economic organization of the societies in the region They shared the same official ideology and were

members of the same alliances After 1989 the region collapsed in an economic political and cultural implosion What were the

moving forces of this profound change What are its consequences Could we try to reasonably foresee any future

developments In this thought provoking book Nikolai Genov presents a systematic description and explanation of Eastern

European societal transformations after 1989 They are interpreted as adaptations to four global trends upgrading the

rationality of organizations individualization spreading of instrumental activism and universalization of value normative

systems Adaptations to these trends have generally been successful However Genov notes that the process is marked by

many failures as well They are mostly caused by path dependency in the societal development and by the varying quality of

relevant decisions other destructive developments are due to contradictions in the global trends themselves Guided by the

assumption that the societal and supranational integration mechanisms in Eastern Europe before 1989 could not resist the

overwhelming power of global trends Genov s controversial findings question visions about the end of history and

simultaneously strengthen the confidence that most complex macro social processes can be rationally managed A timely book

allowing for a much needed engagement in contemporary debates on the controversial processes in Eastern European

Southern Rivers R. Scot Duncan, 2024-03-15 In *Southern Rivers Restoring America's Freshwater Biodiversity* R. Scot Duncan explores the environmental history and future of the rivers of the southeastern United States These river systems are the epicenter of North American freshwater biodiversity and the top global hotspot for several aquatic taxa including mussels turtles snails crayfish and temperate zone fish these rivers also play a prominent role in the region's history culture and economy Unfortunately centuries of industrialization have impaired the region's river systems sacrificing biodiversity and compromising their ability to provide essential ecosystem services like drinking water waste disposal irrigation navigation and power production to human communities And now overall waterflow is diminishing in the Southeast due to increasing heat and drought brought by climate change As these and other threats to the region's water supply increase it may seem necessary to prioritize between using water for natural resource conservation or reserving it for human concerns but Duncan argues this is a false choice Combining nature science and stories in a series of short illustrated chapters *Southern Rivers* takes readers on an illuminating journey of the Southeast's river systems and the many communities that depend on them Duncan cogently articulates the challenges threatening rivers streams and wetlands in the face of the planet's accelerating climate and extinction crises then turns to explore the new solutions conservationists and water managers have developed to preserve them Ultimately the book is both a call to action and a clear comprehensive practical plan to help the Southeast save its water resources and adapt to climate change by restoring the very biodiversity that is now under threat The
