Congress. House. Committee on Science and Technology. Subcommittee on Science, Research, and Technology, 1986 Bioinspired solutions to the challenges of chemical sensing Ramon Huerta, Thomas Nowotny, Chemical sensing is likely the most primordial sensory modality that emerged in the evolution of life Without chemical sensing life on earth would probably not exist It is used for detecting nutrients avoiding threats finding mating partners and various forms of communication and social interaction between animals The advent of artificial sensors has created a myriad of problems in the areas of chemical detection and identification with applications in food quality and pollution control chemical threat detection health monitoring robot control and even odor and taste synthesis Efficient algorithms are needed to address the many challenges of chemical sensing in these areas including but not limited to sensitivity levels sensor drift concentration invariance of analyte identity and complex mixtures Defining and improving analysis methods for artificial chemical sensing remains an active research area in engineering and machine learning alike In the course of evolution animals bacteria and plants have developed sophisticated methods and algorithms for solving difficult problems in chemical sensing very efficiently Complex signalling pathways inside single cells can trigger movement toward the source of a nutrient Complex networks of neurons appear to be able to compute odor types and the distance to a source in turbulent flows These networks of neurons use a combination of temporal coding layered structures simple Hebbian learning rules reinforcement learning and inhibition to quickly learn about chemical stimuli that are critical for their survival Olfaction is a vibrant field of research because recent technological advances allow monitoring and manipulating brain areas inaccessible in the past thus allowing for rapid progress This is particularly relevant because to this date the best solutions to many general chemical sensing problems are still found in animals rather than artificial devices Many lessons may yet have to be learned from biological systems to solve the complex problems of chemical sensing with

similar success as animals routinely do This special issue has the ambitious goal of bringing together biologists and engineers to report on biological solutions and engineering approaches to chemical sensing challenges in order to better understand in what aspects both fields can find common ground of discussion and to thus promote novel areas of interdisciplinary research

mistakes It also provides tangible proof of the need for political decision makers to consider good advice and make wise and cautious decisions Introduced Mammals of the World also provides a comprehensive reference to students of ecological systems management and biological conservation This book is a companion volume to Introduced Birds of the World by the same author published in 1981 and which remains the premier text of its kind in the world more than twenty years after it was published Introduced Mammals of the World provides the most comprehensive account of the movement of mammals around the world providing details on the date s of introduction the person agency responsible the source populations the location s of release the fate of the introductions and the impact if known for over 300 species of mammal **Production**

and Processing of Healthy Meat, Poultry and Fish Products A.M. Pearson,T.R. Dutson,2013-03-09 The central theme for this volume was chosen since consumers have great interest in purchasing low fat low salt and reduced cholesterol meat poultry and fish products As in past volumes experts in the field have been chosen to write chapters with emphasis on their breadth of knowl edge in each specific area Efforts were also made to obtain authors from different countries in order to give the book a worldwide perspective Chapter 1 stresses the nutritional and sensory properties that meat poultry and fish products make to healthful diets and discusses consumer concerns about these products Chapter 2 covers dietary recommendations in major consumer nations along with data from food composition tables and the dietary contributions of meat poultry and fish to meeting dietary needs Chapter 3 discusses the labeling of low and reduced fat salt prod ucts which although written mainly from the US viewpoint may serve as a model for labeling in other countries Chapter 4 reviews the rationale for reducing fat energy levels in muscle foods problems encountered in their production and how these may be solved Chapter 5 discusses the scientific basis for reducing the salt sodium content in food products and the health benefits derived from lowering salt intake Methods of reducing the cholesterol content of these animal products is reviewed in Chapter 6 **Introduction to Livestock and Poultry Production** Jasper S.
