

## Seeking Circle Angles with Answers

In this lesson it is your job to discover relationships that exist in circles.

Using the Exploration sheet "Circle Angle Examples" explore some relationships between arcs and angles for angles that are inscribed within a circle, angles formed on the interior of circles, and angles formed exterior to the circle.

### Inscribed Angles

Using the first Circle examples, fill in the following chart and answer the questions.

Measure of Inscribed Angle	Measure of Intercepted Arc
74.5°	149°
45°	90°
82°	164°
15°	30°

What relationship do you notice between the measure of the inscribed angle and the measure of the intercepted arc?

Each Inscribed angle is half of the intercepted arc, or the intercepted arc is double the inscribed angle.

Can you generalize this relationship into a rule that will always work?

$\text{Inscribed } \angle = \frac{1}{2} \text{ intercepted arc}$

### Angles formed in the Interior of a Circle

Using the second set of circles, investigate the angles formed in the interior of a circle.

Angle Formed	Larger Arc	Smaller Arc	Sum of the two Arcs	$\frac{1}{2}$ (Sum of the two Arcs)	Difference of the two Arcs	$\frac{1}{2}$ (Difference of the two Arcs)
88°	116°	60°	176°	88°	56°	28°
105°	118°	92°	210°	105°	26°	13°
120°	155°	85°	240°	120°	70°	35°
83°	126°	40°	166°	83°	86°	43°

*General Spatial Involute Gearing* Jack Phillips, 2013-03-09 It has been hard for me to escape the imprint of my early strong but scattered trains of thought There was at the beginning little to go by and I saw no clear way to go This book is accordingly filled with internal tensions that are not as yet fully annealed Subsequent writers may re present the work explaining it in a simpler way Others may simply invert it I mean by this that by writing it backwards from its found ends practical machinable teeth to its tentative beginnings dimly perceived geometrical notions one might conceivably write a manual not on how to understand these kinds of gears but on how to make them Indeed a manual will need to be written If this gearing is to be further investigated evaluated and checked for applicability prototypes will need to be made I wish to say again however that my somewhat convoluted way of presenting these early ideas has been inevitable It has simply not been possible to present a tidy set of explanations and rules without exploring first and in a somewhat backwards going direction the complexities of the kinematic geometry There remains now in this book a putting together of primitive geometric intuition computer aided exploration of certain areas geometric explanations of the discovered phenomena and a loose sprinkling of a relevant algebra cementing the parts together
