

Portable mill

Preparing the tractor

To adjust the tractor drawbar to the proper position for power take-off operation, see your tractor operator's manual.

The correct distance between the end of the powershaft and the center of the hitch pin hole is shown in the illustration above.

Hitching to tractor

Back the tractor into position and insert the hitch pin through the hitch plates and drawbar and secure with spring locking pin.

Connecting powershaft

The PTO operating speed of the tractor and roller mill must be the same. The tractor half

of the powershaft will be equipped with six splines for 540 rpm operation or 21 involute splines for 1000 rpm operation.

Normally the roller mill is equipped for 540 rpm operation. If the roller mill is to be used with a tractor equipped for 1000 rpm PTO operation, change the tractor half of the powershaft to a powershaft equipped with a 21 involute splined yoke.

When the mill is being operated by a tractor with a 1000 rpm PTO speed, operate the tractor at a throttle setting that will produce a reading of 950 to 1500 rpm on the tractor speed hour meter. This throttle setting will deliver the correct crushing roll speed of 500 to 750 rpm. Do not operate the roller mill a full 1000 rpm PTO speed.

After making the connection, check to be sure that the powershaft spinner shields are free to operate. Hardening of the paint may cause the shields to be frozen on the shaft temporarily.

When transporting, the powershaft must be disconnected from the tractor and placed on the swinging support.

Tractor controls

PTO Clutch Lever Operating Positions for John Deere 3010 and 4010 Series Tractors

The portable roller mill is operated by the tractor power take-off and is controlled by the tractor power take-off control lever.

For other John Deere tractors or other types of tractors than those illustrated, refer to your tractor operator's manual for proper power take-off operation.
