retains such an assured retaliation capability no sane leader would intentionally launch a nuclear attack against it and nuclear deterrence will hold According to this theory possessing more weapons than necessary for a second strike capability is illogical This argument is reasonable but when compared to the empirical record it raises an important puzzle Empirically we see that the United States has always maintained a nuclear posture that is much more robust than a mere second strike capability In *The Logic of American Nuclear Strategy* Matthew Kroenig challenges the conventional wisdom and explains why a robust nuclear posture above and beyond a mere second strike capability contributes to a state's national security goals In fact when a state has a robust nuclear weapons force such a capability reduces its expected costs in a war provides it with bargaining leverage and ultimately enhances nuclear deterrence This book provides a novel theoretical explanation for why military nuclear advantages translate into geopolitical advantages In so doing it helps resolve one of the most intractable puzzles in international security studies Buoyed by an innovative thesis and a vast array of historical and quantitative evidence *The Logic of American Nuclear Strategy* will force scholars to reconsider their basic assumptions about the logic of nuclear deterrence

Johnson,2001-04-23 This study examined whether the leadership experiences and leadership behaviors of United States healthcare facility Chief Executive Officers are affected by military or civilian experience The study also investigated whether differences in leadership outcomes as perceived by key subordinates were affected by the CEO's leadership development experiences or leadership behaviors The goal of this study was to investigate how occupationally similar yet experientially diverse military and civilian hospital CEOs differ in significant leadership experiences behaviors and three performance outcomes namely perceived effectiveness follower satisfaction with the leader and willingness of subordinates to put forth extra effort Responses from a national sample of civilian and military healthcare facility CEOs affiliated with the American College of Healthcare Executives were used to address the research questions A total of 117 healthcare facility CEOs and 190 key subordinates completed surveys designed to evaluate leadership development experiences and subordinates perceptions of leader behaviors and outcomes Analysis of Variance was chosen as the method for data analysis to describe quantitatively the relationship between CEO military experience and leadership development experiences leadership styles and leadership outcomes Results indicated that the CEO's adult leadership development activities differed by military experience The facility CEOs with prior military experience had unique leadership promoting and inhibiting factors However the prediction was not supported that the military CEOs would exhibit stronger leadership behaviors Again significant differences were not found between facility CEO groups in mean scores for leadership outcomes of extra effort satisfaction and perceived effectiveness of the leader The study findings added to the healthcare leadership knowledge base concerning improvement of the organizational outcomes of United States healthcare

facilities In addition the results of this study have potential for linkage with assessments of ongoing military and civilian healthcare leader development initiatives      *Handbook of Prescriptive Treatments for Adults* Robert T. Ammerman, Michel Hersen, 2013-11-11 This book could not have been conceptualized or published 20 years ago Indeed it is doubtful that we could have organized the material for this handbook 10 years ago Over the last 20 years however the painstaking efforts of many clinical researchers working with a variety of resistive psychopathologies have resulted in specific psychotherapies and pharmacotherapies that are effective with a significant proportion of patients at least for some of the disorders Much clinical research remains to be carried out in the forthcoming decades But now that we are nearing the 21st century at least some statement about efficacy can be made In 1967 Gordon Paul succinctly stated that the ultimate goal of treatment outcome research is to determine What treatment by whom is most effective for this individual with that specific problem and under which set of circumstances p 111 At that time empirical evaluations of psychosocial and pharmacologic treatments were few and far between Methodological strategies for determining treatment effectiveness were also in the formative stage as exemplified by introduction of control groups that received inactive interventions i e placebo and the relatively recent practice of comparing two or more treatments in addition to placebo In the almost three decades since Paul's oft quoted dictum both the quantity and the quality of treatment outcome research with adults have increased dramatically
