Economic, Sustainability, and Policy Perspectives Ranjan Kumar Ghosh, Jens Rommel, Ilona M. Otto, 2022-04-26 **Rescuing Econometrics** Duo Qin, 2023-12-01 Haavelmo s 1944 monograph The Probability Approach in Econometrics is widely acclaimed as the manifesto of econometrics This book challenges Haavelmo s probability approach shows how its use is delivering defective and inefficient results and argues for a paradigm shift in econometrics towards a full embrace of machine learning with its attendant benefits Machine learning has only come into existence over recent decades whereas the universally accepted and current form of econometrics has developed over the past century A comparison between the two is however striking The practical achievements of machine learning significantly outshine those of econometrics confirming the presence of widespread inefficiencies in current econometric research The relative efficiency of machine learning is based on its theoretical foundation and particularly on the notion of Probably Approximately Correct PAC learning Careful examination reveals that PAC learning theory delivers the goals of applied economic modelling research far better than Haavelmo s probability approach Econometrics should therefore renounce its outdated foundation and rebuild itself upon PAC learning theory so as to unleash its pent up research potential The book is catered for applied economists econometricians economists

During 1985-86 the acquisition editor for the humanities and social sciences division of Kluwer Academic Publishers in the
Netherlands visited the University of Florida where I was also visiting while on sabbatical leave from Wilfrid Laurier
University as the McKethan Matherly Senior Research Fellow to discuss publishing plans of the faculty He expressed a keen
interest in publishing the proceedings of the conference of the Canadian Econometric Study Group CESG that was to be held
the following year at WLU This volume is the end product of his interest endurance and persistence But for his persistence I
would have given up on the project Most of the papers though not all included in this volume are based on presentations at
CESG conferences In some cases scholars were invited to contribute to this volume where their research complimented those
presented at these conferences even though they were not conference participants Since papers selected for presentation at
the CESG conferences are generally the finished product of scholarly research and often under submission to refereed
journals it was not possible to publish the conference proceedings in their entirety Accordingly it was decided in consultation
with the publisher to invite a select list of authors to submit significant extensions of the papers they presented at the CESG

conferences for inclusion in this volume The editor wishes to express gratitude to all those authors who submitted their papers for evaluation by anonymous referees and for making revisions to conform to our editorial process

Financial Intermediation in Europe Luke Drago Spajic, 2012-12-06 Two items were firmly on the European economic agenda in the 1990s financial market integration and the creation of a common or single currency The former was supposed to have been achieved in 1992 via the Single Market Act with some derogations and the latter came into being on January 1 1999 This study is concerned with a particular connection between the two themes namely the process of financial intermediation and especially the role of banking

1 1 Financial Monetary Integration in Europe Up until the mid 1980s European financial intermediation was as elsewhere on shore in the post war period broadly characterised by a relatively high degree of diverse regulatory control and with cross border restrictions e g in the form of exchange controls This resulted in the administration of interest rates and pegging of prime market yields as well as restrictions on intermediary specialisation Hence it was easy to understand why price competition was hardly ever seen Within this kind of environment banks and other financial intermediaries OFIs competed mainly on non price terms for example through the expansion of branch networks The Single Market Programme SMP launched in 1986 was in a complex way intended to level out and open up the domestic markets of the European Union EU to competition from entities in other Member States
