Develop and train machine learning algorithms. Visualize social networks and graph data. Deploy supervised and unsupervised classification algorithms. Discover how to visualize spatial data with R. In Detail R is an essential language for sharp and successful data analysis. Its numerous features and ease of use make it a powerful way of mining, managing, and interpreting large sets of data. In a world where understanding big data has become key, by mastering R you will be able to deal with your data effectively and efficiently. This book will give you the guidance you need to build and develop your knowledge and expertise. Bridging the gap between theory and practice, this book will help you to understand and use data for a competitive advantage. Beginning with taking you through essential data mining and management tasks such as munging, fetching, cleaning, and restructuring, the book then explores different model designs and the core components of effective analysis. You will then discover how to optimize your use of machine learning algorithms for classification and recommendation systems, beside the traditional and more recent statistical methods. Style and approach Covering the essential tasks and skills within data science, *Mastering Data Analysis* provides you with solutions to the challenges of data science. Each section gives you a theoretical overview before demonstrating how to put the theory to work with real world use cases and hands-on examples. **Mastering Scientific Computing with R** Paul Gerrard, Radia M.
