Rabbit Anatomy and Dissection Guide Bruce D. Wingerd, 2007

Rabbit Anatomy Soma Mukhopadhyay (Professor), Lisa Ruggiero Wagner, 2023

Laboratory Guide to Vertebrate Dissection for Students of Anatomy Arthur Beeny Appleton, 1929 As its title indicates this is a book for use in a practical comparative anatomy course It is intended for a somewhat unusual class of student and consequently its contents outlook and method of treatment are unlike those of the standard texts in this subject As stated in the preface it is assumed that the student has already done a course in elementary zoology including the usual vertebrate types and has also examined in more detail a mammal Unless this mammal were man a number of comparisons in the book would be missed To obtain full benefit from it the student should obviously have taken the preliminary medical studies including a fair amount of human anatomy This is not meant to imply that the student of advanced zoology cannot get many useful hints and fresh points of view from its pages he undoubtedly can The types treated in a series of regional dissections are the lamprey the dogfish Squalus Necturus the lizard and the dog As it is intended for assistance in dissection information regarding osteology and the details of the central nervous system have been purposely omitted and conversely the muscles are treated somewhat more fully than is customary

A Laboratory Guide to the Anatomy of The Rabbit Edward H. Craigie, 1966-01-01 The present work does not in any way aim to replace Bensley's Practical Anatomy of the Rabbit which has long since proved its value beyond question The attempt has been to meet a need for a shorter and less detailed laboratory guide adapted to courses for which Bensley's Anatomy has been found too extensive Classes for which the present book is designed have

assignments of time for this subject varying from about twenty four hours to about sixty hours Some of them have two hour periods and some have three hour periods Some moreover have need for special emphasis on certain parts which are of less immediate interest to others Of the twenty eight illustrations fifteen are new and the remainder have been borrowed from Bensley s Practical Anatomy Four of the latter were the work of the late Dr Bensley the rest were prepared by the present author
