complexity of automotive systems are among the criteria that the contributing authors set themselves to meet In many cases multiple and often conflicting requirements give rise to multi objective constrained optimization problems which are also considered Some of these problems fall into the domain of the traditional multi disciplinary optimization applied to system sub system or component design parameters and is performed based on system models others require applications of optimization directly to experimental systems to determine either optimal calibration or the optimal control trajectory control law Optimization and Optimal Control in Automotive Systems reflects the state of the art in and promotes a comprehensive approach to optimization in automotive systems by addressing its different facets by discussing basic methods and showing practical approaches and specific applications of optimization to design and control problems for automotive systems The book will be of interest both to academic researchers either studying optimization or who have links with the automotive industry and to industrially based engineers and automotive designers
