

## Central Net Force Model Worksheet 1: Radial Net Forces and Circular Motion

### 1. Modeling ball with constant velocity

- a. The surveillance ball has a constant circular path to the right. Draw a diagram to indicate how you would predict the ball to respond to:

One source for surveillance ball suspension  
constant net force pointing right as shown in:

$F_n$  is radial force

- b. While you are modeling the ball's path, are the forces unbalanced? Check a force diagram for the ball.

This results in the ball's path not being circular. If they were the ball would go in a straight line. The force diagram for the right is the force pointing outwards of the circle resulting in the ball's path not being circular.

- c. Is the ball accelerating? If so, what is changing about the velocity? (considering the ball's net velocity vector). The accelerating direction is a constant in the ball's motion is changing.

### 2. An unknown force, acceleration is what it is:

- a. Draw a force diagram for a ball with unknown force pointing

- b. Name the force that directed the path to the right is what

This ball's path is changing in the direction of the ball's motion.
