Access Control Management in Cloud Environments Hua Wang, Jinli Cao, Yanchun Zhang, 2020-09-29 This textbook introduces new business concepts on cloud environments such as secure scalable anonymity and practical payment protocols for the Internet of things and Blockchain technology The protocol uses electronic cash for payment transactions In this new protocol from the viewpoint of banks consumers can improve anonymity if they are worried about disclosure of their identities in the cloud Currently there is not a book available that has reported the techniques covering the protocols with anonymizations and Blockchain technology Thus this will be a useful book for universities to purchase This textbook provides new direction for access control management and online business with new challenges within Blockchain technology that may arise in cloud environments One is related to the authorization granting process For example when a role is granted to a user this role may conflict with other roles of the user or together with this role the user may have or derive a high level of authority Another is related to authorization revocation For instance when a role is revoked from a user the user may still have the role Experts will get benefits from these challenges through the developed methodology for authorization granting algorithm and weak revocation and strong revocation algorithms *Multivariate Statistical Methods* György

Terdik, 2021-10-26 This book presents a general method for deriving higher order statistics of multivariate distributions with simple algorithms that allow for actual calculations Multivariate nonlinear statistical models require the study of higher order moments and cumulants The main tool used for the definitions is the tensor derivative leading to several useful expressions concerning Hermite polynomials moments cumulants skewness and kurtosis A general test of multivariate skewness and kurtosis is obtained from this treatment Exercises are provided for each chapter to help the readers understand the methods Lastly the book includes a comprehensive list of references equipping readers to explore further on their own **The**

Theory of Sprays and Finsler Spaces with Applications in Physics and Biology P.L. Antonelli, Roman S. Ingarden, M. Matsumoto, 2013-03-09 The present book has been written by two mathematicians and one physicist a pure mathematician specializing in Finsler geometry Makoto Matsumoto one working in mathematical biology Peter Antonelli and a mathematical physicist specializing in information thermodynamics Roman Ingarden The main purpose of this book is to present the principles and methods of sprays path spaces and Finsler spaces together with examples of applications to physical and life sciences It is our aim to write an introductory book on Finsler geometry and its applications at a fairly advanced level It is intended especially for graduate students in pure mathematics science and applied mathematics but should be also of interest to those pure Finslerists who would like to see their subject applied After more than 70 years of relatively slow development Finsler geometry is now a modern subject with a large body of theorems and techniques and has mathematical content comparable to any field of modern differential geometry The time has come to say this in full voice against those who have thought Finsler geometry because of its computational complexity is only of marginal interest and with practically no

interesting applications Contrary to these outdated fossilized opinions we believe the world is Finslerian in a true sense and we will try to show this in our application in thermodynamics optics ecology evolution and developmental biology On the other hand while the complexity of the subject has not disappeared the modern bundle theoretic approach has increased greatly its understandability

Quadratic and Higher Degree Forms Krishnaswami Alladi, Manjul Bhargava, David Savitt, Pham Huu Tiep, 2013-08-13 In the last decade the areas of quadratic and higher degree forms have witnessed dramatic advances This volume is an outgrowth of three seminal conferences on these topics held in 2009 two at the University of Florida and one at the Arizona Winter School The volume also includes papers from the two focused weeks on quadratic forms and integral lattices at the University of Florida in 2010 Topics discussed include the links between quadratic forms and automorphic forms representation of integers and forms by quadratic forms connections between quadratic forms and lattices and algorithms for quaternion algebras and quadratic forms The book will be of interest to graduate students and mathematicians wishing to study quadratic and higher degree forms as well as to established researchers in these areas Quadratic and Higher Degree Forms contains research and semi expository papers that stem from the presentations at conferences at the University of Florida as well as survey lectures on quadratic forms based on the instructional workshop for graduate students held at the Arizona Winter School The survey papers in the volume provide an excellent introduction to various aspects of the theory of quadratic forms starting from the basic concepts and provide a glimpse of some of the exciting questions currently being investigated The research and expository papers present the latest advances on quadratic and higher degree forms and their connections with various branches of mathematics

Case and Agreement in Inuit Reineke Bok-Bennema, 2011-07-19 The architecture of the human language faculty has been one of the main foci of the linguistic research of the last half century This branch of linguistics broadly known as Generative Grammar is concerned with the formulation of explanatory formal accounts of linguistic phenomena with the ulterior goal of gaining insight into the properties of the language organ The series comprises high quality monographs and collected volumes that address such issues The topics in this series range from phonology to semantics from syntax to information structure from mathematical linguistics to studies of the lexicon

Goldsmith, Jason Riggle, Alan C. L. Yu, 2011-09-15 The Handbook of Phonological Theory second edition offers an innovative and detailed examination of recent developments in phonology and the implications of these within linguistic theory and related disciplines Revised from the ground up for the second edition the book is comprised almost entirely of newly written and previously unpublished chapters Addresses the important questions in the field including learnability phonological interfaces tone and variation and assesses the findings and accomplishments in these domains Brings together a renowned and international contributor team Offers new and unique reflections on the advances in phonological theory since publication of the first edition in 1995 Along with the first edition still in publication it forms the most complete and current overview of the subject in print **United Nations Documents Index** Dag Hammarskjöld Library, 2007 *Number in the World's Languages* Paolo Acquaviva, Michael Daniel, 2022-06-21 The strong development in research on grammatical number in recent years has created a need for a unified perspective The different frameworks the ramifications of the theoretical questions and the diversity of phenomena across typological systems make this a significant challenge This book addresses the challenge with a series of in depth analyses of number across a typologically diverse sample unified by a common set of descriptive and analytic questions from a semantic morphological syntactic and discourse perspective Each case study is devoted to a single language or in a few cases to a language group They are written by specialists who can rely on first hand data or on material of difficult access and can place the phenomena in the context of the respective system The studies are preceded and concluded by critical overviews which frame the discussion and identify the main results and open questions With specialist chapters breaking new ground this book will help number specialists relate their results to other theoretical and empirical domains and it will provide a reliable guide to all linguists and other researchers interested in number An Introduction to Formal Languages and Machine Computation Song Y. Yan, 1998 This book provides a concise and modern introduction to Formal Languages and Machine Computation a group of disparate topics in the theory of computation which includes formal languages automata theory turing machines computability complexity number theoretic computation public key cryptography and some new models of computation such as quantum and biological computation As the theory of computation is a subject based on mathematics a thorough introduction to a number of relevant mathematical topics including mathematical logic set theory graph theory modern abstract algebra and particularly number theory is given in the first chapter of the book The book can be used either as a textbook for an undergraduate course for a first year graduate course or as a basic reference in the field An Introduction to Formal Languages and Automata Peter Linz, 2001 Formal languages automata computability and related matters form the

The Languages and Linguistics of Northern Asia Edward Vajda, 2024-03-04 The Languages and Linguistics of Northern Asia A Comprehensive Guide surveys the indigenous languages of Asia s North Pacific Rim Siberia and adjacent portions of Inner Eurasia It provides in depth descriptions of every first order family of this vast area with special emphasis on family internal subdivision and dialectal differentiation Individual chapters trace the origins and expansion of the region s widespread pastoral based language groups as well as the microfamilies and isolates spoken by northern Asia s surviving hunter gatherers Separate chapters cover sparsely recorded languages of early Inner Eurasia that defy precise classification and the various pidgins and creoles spread over the region Other chapters investigate the typology of salient linguistic features of the area including vowel harmony noun inflection verb indexing also known as agreement complex morphologies and the syntax of complex predicates Issues relating to genealogical ancestry areal contact and language endangerment receive equal attention With historical connections both to Eurasia s pastoral based empires as well as to ancient population movements into the Americas the steppes taiga forests tundra and coastal fringes of northern Asia offer a complex and fascinating object of linguistic investigation

Optimality-theoretic Syntax, Semantics, and Pragmatics Géraldine Legendre, Michael T. Putnam, Henriëtte de Swart, Erin Zaroukian, 2016 This book investigates the morphosyntactic semantic and pragmatic properties of language and the interactions between them from the perspective of Optimality Theory It integrates optimization processes into the formal and functional study of grammar interpreting optimization as the result of conflicting violable ranked constraints Unlike previous work on the topic this book also takes into account the question of directionality of grammar A model of grammar in which optimization processes interact bidirectionally allows both language generation the process of selecting the optimal form of a given meaning and language interpretation the process of optimal interpretation of a given form to be taken into account Chapters in this volume explore the consequences of both symmetric unidirectional and asymmetric bidirectional versions of Optimality Theory investigating the syntax semantics interface first language acquisition and sequential bilingual grammars The volume presents cutting edge research in Optimality Theoretic syntax and semantics as well as demonstrating how optimization processes as modelled in this formalism serve as a viable approach for linguists and scholars in related fields

Shopping Centre Marketing Piotr Krowicki, Grzegorz Maciejewski, 2024-02-26 There are almost 10 000 shopping centres in Europe and in the United States there are over 100 000 many of which have entered the end of life phase due to growing e retail Therefore the issue of how customers perceive the value of these facilities and customer engagement in the relationship with the shopping centre is becoming increasingly important In this book the authors evaluate the relationship between the perceived value of a shopping centre and customer engagement by identifying consumer motives purchase behaviour and responsiveness to marketing strategies It offers an

analysis of the conceptualisation and history of shopping centres and utilises both theoretical and empirical research presenting results from extensive studies and building a framework for value creation in retail spaces The book will find a wide audience among scholars interested in marketing and retail management The practical implications discussed will also provide further research opportunities and insights for astute practitioners *An Elementary Treatise on the Dynamics of a Particle and of Rigid Bodies* Sidney Luxton Loney,1960 *Geometry of CR-Submanifolds and Applications* Bang-Yen Chen,Mohammad Hasan Shahid,Gabriel-Eduard Vilcu,2025-08-29 This book attempts to present a comprehensive survey of the geometry of CR submanifolds The theory of submanifolds is one of the most interesting topics in differential geometry The topic is introduced by Aurel Bejancu as a generalization of holomorphic and totally real submanifolds of almost Hermitian manifolds in 1978 Afterward the study of CR submanifolds became a very active research subject Organized into 22 chapters the book starts with basic knowledge of Riemannian manifolds and submanifolds almost Hermitian manifolds and their subclasses Hopf fibration symmetric spaces and a general inequality for submanifolds in complex space forms in Chaps 1 and 2 Later it presents the main results on CR submanifolds in Kaehler manifolds the basic inequalities associated with CR submanifolds in Kaehler manifolds and several theories and results related to Kaehler manifolds in Chaps 3 11 Further the book discusses the basics of almost contact metric manifolds and their subclasses CR submanifolds of Sasakian trans Sasakian and quasi Sasakian manifolds with a particular attention on the normal CR submanifolds in Chap 12 It also investigates the contact CR submanifolds of S manifolds the geometry of submersions of CR submanifolds and the results on contact CR warped product submanifolds in Chaps 16 18 20 In Chapter 19 we discuss submersions of CR submanifolds The book also presents some recent results concerning CR submanifolds of holomorphic statistical manifolds In particular it gives the classification of totally umbilical CR statistical submanifolds in holomorphic statistical manifolds as well as a Chen Ricci inequality for such submanifolds Chapter 21 In the last chapter we present results on CR submanifolds of indefinite Kaehler manifolds and their applications to physics **Global and National Soils and Terrain Digital Databases (SOTER)** Food and Agriculture Organization of the United Nations. The Ultimate Challenge Jeffrey C. Lagarias,2023-04-19 The $3x + 1$ problem or Collatz problem concerns the following seemingly innocent arithmetic procedure applied to integers If an integer x is odd then multiply by three and add one while if it is even then divide by two The $3x + 1$ problem asks whether starting from any positive integer repeating this procedure over and over will eventually reach the number 1 Despite its simple appearance this problem is unsolved Generalizations of the problem are known to be undecidable and the problem itself is believed to be extraordinarily difficult This book reports on what is known on this problem It consists of a collection of papers which can be read independently of each other The book begins with two introductory papers one giving an overview and current status and the second giving history and basic results on the problem These are followed by three survey papers on the problem relating it to number theory and dynamical

systems to Markov chains and ergodic theory and to logic and the theory of computation The next paper presents results on probabilistic models for behavior of the iteration This is followed by a paper giving the latest computational results on the problem which verify its truth for $x \leq 4 \cdot 10^{18}$ The book also reprints six early papers on the problem and related questions by L Collatz J H Conway H S M Coxeter C J Everett and R K Guy each with editorial commentary The book concludes with an annotated bibliography of work on the problem up to the year 2000
