**Problem of Time** Edward Anderson,2017-09-18 This book is a treatise on time and on background independence in physics  
 It first considers how time is conceived of in each accepted paradigm of physics Newtonian special relativity quantum  
 mechanics QM and general relativity GR Substantial differences are moreover uncovered between what is meant by time in  
 QM and in GR These differences jointly source the Problem of Time Nine interlinked facets which arise upon attempting  
 concurrent treatment of the QM and GR paradigms as is required in particular for a background independent theory of  
 quantum gravity A sizeable proportion of current quantum gravity programs e g geometrodynamical and loop quantum  
 gravity approaches to quantum GR quantum cosmology supergravity and M theory are background independent in this sense  
 This book s foundational topic is thus furthermore of practical relevance in the ongoing development of quantum gravity  
 programs This book shows moreover that eight of the nine facets of the Problem of Time already occur upon entertaining  
 background independence in classical rather than quantum physics By this development and interpreting shape theory as  
 modelling background independence this book further establishes background independence as a field of study Background  
 independent mechanics as well as minisuperspace spatially homogeneous models of GR and perturbations thereabout are  
 used to illustrate these points As hitherto formulated the different facets of the Problem of Time greatly interfere with each  
 others attempted resolutions This book explains how none the less a local resolution of the Problem of Time can be arrived at  
 after various reconceptualizations of the facets and reformulations of their mathematical implementation Self contained  
 appendices on mathematical methods for basic and foundational quantum gravity are included Finally this book outlines how  
 supergravity is refreshingly different from GR as a realization of background independence and what background  
 independence entails at the topological level and beyond **Michigan School Moderator** ,1892
