Calm Smooth and Smart Novel Approaches for Influencing Vibrations by Means of Deliberately Introduced Dissipation The
contributions help reduce unwanted vibrations by developing novel approaches for influencing them and lead to a calm
smooth and smart behaviour of technical units Calm represents the demand to avoid or at least to severely reduce unwanted
noise generated by technical installations Smooth ensures a still comfortable and jerk free operation of them Finally smart
means that the introduced damping devices not only help to achieve the desired vibrational behaviour of the overall technical
systems but also that they take over additional functional tasks The results presented in this volume summarize the state of
the art and provide motivation for future research The book is intended for experienced researchers as well as for doctoral
and post doctoral students in engineering mathematics and physics as well as industrial researchers interested in the field
