<sup>1</sup>Basavarajappa, <sup>2</sup>D. Venkatesan, and <sup>3</sup>M. Vidya

The present study is an attempt to revalidate and develop normative data on a non-verbal test of intelligence-Seguin Form Board (SFB). The SFB was administered on a sample of 720 children including 361 boys and 359 girls between age group of 36-120 months (Mean Age: 89.19 months; SD: 20.82) drawn from rural and urban areas and belonging to different social economic status groups. Results indicate that SFB continues to remain a valid and reliable speed test of intelligence at lower age levels of children. However, there is need to evolve separate norms on SFB for different age groups, socio-economic status levels, and area of residence (rural and urban) respectively. An attempt is also made in this study to demonstrate a modified procedure of test performance as relatively more appropriate, superior and effective for estimation of mental ages/IQ of children on this test.

Prior to Itard's (1932) pioneering work, attempts were made to assess the intellectual (non-verbal) abilities of children who could not or would not speak more directly. Seguin (1856) developed a simple but a unique testing method using form boards for assessment of intellectual abilities in children through non-verbal means. The instrument and its many derivatives have become widely used and are well known universally as Seguin Form Board (SFB) (Du Bois, 1970). Stanford-Binet Intelligence Scale includes a Seguin-like form board, a merger of efforts by Binet, Simon and Seguin -the three pioneers in the field of intelligence test development. Since early 1900s, non-verbal intelligence testing has developed methods for assessing cognitive functioning of children who could not or would not speak. The SFB was basically constructed as teaching aid under 'Physiological Method' for children with mental retardation (Seguin, 1866). Later, it was used to assess general intelligence of children in pre-primary and primary school years (Spearman, 1927); or for measuring visual discrimination and matching, eye-hand coordination and cognitive-perceptual abilities

in children (David & Virginia, 1972). Wallin (1916) regards the SFB as a most useful device to test form perception, movement and intelligence-that is, psycho-motor development. Form Board tests were also used for measurement of ability to manipulate concrete material in contrast to verbal/abstract ability. Wallin (1916) observed that the performance (speed) on form board increases with chronological and mental age-more rapidly in early years. He suggested that tests are of little value diagnostically unless periodically fortified with reliable age norms. According to David and Virginia (1972), analysis of SFB test has shown that vector loadings for the test to differ among age levels, indicating that the test may be measuring different abilities at different age levels.

There have been efforts to develop Indian norms for SFB from time to time. In a survey on Mumbai school children (N= 378) within a limited age range (6-8 years), the speed of performance was found to be slower than their Western counterparts (Ramachandran, Deshpande, Apte, .. Shukla, and Shah, (1968). Around the same time, Bharatraj (1971) improved on the sample

**Neuropsychology** Gerald Goldstein, Paul David Nussbaum, Sue R. Beers, 2013-06-29 In this volume of the series Human Brain Function Assessment and Rehabilitation we cover the area of how brain function is assessed with behavioral or neuropsychological instruments These assessments are typically conducted by clinical neuropsychologists or behavioral neurologists and so we made an effort to present the somewhat differing approaches to these two related disciplines Clinical neuropsychologists are psychologists who typically utilize standardized tests while behavioral neurologists are physicians who generally assess brain function as part of the clinical neurological evaluation Both approaches have much to offer The basic assumption of neuropsychological assessment is that the brain is the organ of behavior and therefore the condition of the brain may be evaluated with behavioral measures Neuropsychological tests are those measures found by research to be particularly sensitive to alterations in brain function An adequate neuropsychological test is a procedure that can be related to some objective measure of alteration in brain function Over the years these objective measures have changed but generally involve documentation through direct observation of brain tissue or through histological pathological neuroimaging or other laboratory procedures The methods described in the first two volumes of this series describe the neuroimaging procedures that are often used in the validation of neuropsychological tests

**Clinical Psychology** Sol L. Garfield, 2007-12-01 Interest in clinical psychology has been growing as indicated by large numbers of undergraduates applying for admission to graduate programs and the professional degrees granted This book is written for anyone with a strong interest in clinical psychology but also provides a comprehensive and realistic view of the field The book therefore can serve as a reference for courses in clinical psychology but it will be relevant to courses in personality and personal counseling Professional clinical psychologists and members of related professions may also find the book valuable because Garfield describes important historical developments that have

helped to shape the field the roles and functions of the clinical psychologist their training programs and contemporary issues and problems The text also describes the theoretical models that guide the work of the clinical psychologist and upon which the divergent approaches to clinical work are based Changes in the functions of the clinical psychologist are reflected in the greater emphasis on psychotherapeutic and behavior change methods and in the correspondingly reduced emphasis on diagnostic testing procedures a development discernible in the decline in studies of high quality bearing on diagnostic issues This book provides a reliable source of information for the individual who contemplates a professional career as a clinical psychologist and seeks to learn what the profession encompasses Sol L Garfield 1918 2004 was Professor of Psychology and Director Clinical Psychology Program Washington University in St Louis Garfield has been widely published in the major journals and his books include Handbook of Psychotherapy and Behavior Change co edited with A E Bergin and The Practice of Brief Psychotherapy He is a former President of the Division of Clinical Psychology American Psychological Association and has been Consulting Editor for the American Journal of Mental Deficiency the Journal of Abnormal Psychology and the Journal of Consulting and Clinical Psychology

**Sex Roles of Children in Contemporary Indian Society** Sushila Srivastava, 1990 India has witnessed profound changes in almost every aspect of life The process of industrialization urbanisation and secularization have brought about socio psychological changes in the attitudes and values of people of this country especially among the urban population One of the changes is breaking down of traditional sex role differentiations resulting in an increased flexibility in the roles and activities considered permissible for each sex especially for girls and women Yet being still typically a traditional society the effect of these secular changes is unknown or remains a guess In this book the author attempts to answer the question as to how far these changes have affected the sex role behaviour of the Indian children The exhaustive review of empirical studies on sex roles is useful for those who wish to have a consolidated account of researches on sex roles carried out till now This book will be useful for parents teachers educators and students of Home Science Psychology Sociology and Anthropology
