appear that clean up officials are simply walking away from contaminated sites When is natural attenuation the appropriate approach to a clean up This book presents the consensus of a diverse committee informed by the views of researchers regulators and community activists The committee reviews the likely effectiveness of natural attenuation with different classes of contaminants and describes how to evaluate the footprints of natural attenuation at a site to determine whether natural processes will provide adequate clean up Included are recommendations for regulatory change The committee emphasizes the importance of the public's belief and attitudes toward remediation and provides guidance on involving community stakeholders throughout the clean up process The book explores how contamination occurs explaining concepts and terms and includes case studies from the Hanford nuclear site military bases as well as other sites It provides historical background and important data on clean up processes and goes on to offer critical reviews of 14 published protocols for evaluating natural attenuation
