BOOK JACKET Looking Beyond the Z Eileen C. Brennan, 1988 Physics at the Large Hadron Collider Amitava Datta, B. Mukhopadhyaya, A. Raychaudhuri, 2010-05-30

In an epoch when particle physics is awaiting a major step forward the Large Hadron Collider LHC at CERN Geneva will soon be operational. It will collide a beam of high energy protons with another similar beam circulating in the same 27 km tunnel but in the opposite direction resulting in the production of many elementary particles some never created in the laboratory before. It is widely expected that the LHC will discover the Higgs boson the particle which supposedly lends masses to all other fundamental particles. In addition the question as to whether there is some new law of physics at such high energy is likely to be answered through this experiment. The present volume contains a collection of articles written by international experts both theoreticians and experimentalists from India and abroad which aims to acquaint a non specialist with some basic issues related to the LHC. At the same time it is expected to be a useful rudimentary companion of introductory exposition and technical expertise alike and it is hoped to become unique in its kind. The fact that there is substantial Indian involvement in the entire LHC endeavour at all levels including fabrication physics analysis procedures as well as theoretical studies is also amply brought out in the collection.

The Tests of Time Lisa M. Drolling, Arthur F. Gianelli, Glenn N. Statile, 2017-09-25

The development of physical theory is one of our greatest intellectual achievements. Its products the currently prevailing theories of physics astronomy and cosmology have proved themselves to possess intrinsic beauty and to have enormous explanatory and predictive power. This anthology of primary readings chronicles the birth and maturation of five such theories the heliocentric theory the electromagnetic field theory special and general relativity quantum theory and the big bang theory in the words of the scientists who brought them to life. It is the first historical account that captures the rich substance of these theories each of which represents a fascinating story of the interplay of evidence and insight and of dialogue among great minds. Readers sit in with Copernicus Kepler and Galileo as they overturn the geocentric universe observe the genius of Faraday and Maxwell as they discover the electromagnetic field look over Einstein's shoulder as he works out the details of relativity listen in as Einstein and Bohr argue for the soul of quantum mechanics in the Completeness Debate and watch as Hubble and others reveal the history of the universe. The editors approach highlights the moments of discovery that rise from scientific creativity and the presentation humanizes the scientific process revealing the extent to which great scientists were the first to consider the philosophical implications of their work. But most significantly the editors offer this as their central thesis although each was ushered in by a revolution and each contains counterintuitive elements that delayed its acceptance these five theories exhibit a continuous rational development that has led them to a permanent place in the worldview of science. Accessible to the general reader yet sufficiently substantive that working scientists will find value in it. *The Tests of Time* offers an intimate
