Physical Science Scope November 2014:

Review of the Draft 2014 Science Mission Directorate Science Plan National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Assessment of the NASA Science Mission Directorate 2014 Science Plan, 2013-12-02 NASA's Science Mission Directorate SMD is engaged in the final stages of a comprehensive agency wide effort to develop a new strategic plan at a time when its budget is under considerable stress. SMD's Science Plan serves to provide more detail on its four traditional science disciplines: astronomy and astrophysics, solar and space physics (also called heliophysics), planetary science, and Earth remote sensing and related activities than is possible in the agency wide Strategic Plan. Review of the Draft 2014 Science Mission Directorate Science Plan comments on the responsiveness of SMD's Science Plan to the National Research Council's guidance on key science issues and opportunities in recent NRC decadal reports. This study focuses on attention to interdisciplinary aspects and overall scientific balance, identification and exposition of important opportunities for partnerships as well as education and public outreach, and integration of technology development with the science program. The report provides detailed findings and recommendations relating to the draft Science Plan.

Review of the Restructured Research and Analysis Programs of NASA's Planetary Science Division National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Review of NASA's Planetary Science Division's Restructured Research and Analysis Program, 2017-07-22 The Research and Analysis (R&A) program is a laboratory research, theoretical modeling, and computational studies, geological and astrobiological fieldwork in planetary analog environments on Earth, geological mapping of planetary bodies, analysis of data from Earth and space based telescopes, and development of flight instruments and technology needed for future planetary science missions. The primary role of the PSD R&A program is to address NASA's strategic objective for planetary science and PSD's science goals. Recently, PSD reorganized the R&A program to provide better alignment with the strategic goals for planetary sciences. The major changes in the R&A program involved consolidating a number of prior program elements, many of which were organized by subdiscipline, into a smaller number of thematic core research program elements. Despite numerous efforts by PSD to communicate the rationale for the reorganization and articulate clearly the new processes, there has been significant resistance from the planetary science community and concerns in some sectors regarding the major realignment of funding priorities. Review of NASA's Planetary Science Division's Restructured Research and Analysis Programs examines the new R&A program and determines if it appropriately aligns with the agency's strategic goals, supports existing flight programs, and enables future missions. This report explores whether any specific research areas or subdisciplinary groups that are critical to NASA's strategic objectives for planetary science and PSD's science goals are not supported appropriately in the current program or have been inadvertently disenfranchised through the reorganization.

on Appropriations. Subcommittee on Commerce, Justice, Science, and Related Agencies, 2014 *Women, Disability and Mental Distress* Julia L.T. Smith, 2016-02-17 Over recent decades an increasing amount of attention has been paid to identifying and meeting the individual support needs of mental health service users and people with physical impairments in the UK Evidence of this can be seen within the literature that considers mental health and physical impairment from a wide range of perspectives as well as the increased range of service provision for individuals within both categories However the support needs of individuals who fall into both categories have largely been overlooked by social care and health service providers practitioners and organisations for whom the main focus is either mental health or physical impairment The lack of attention that has been given in theory and in practice to the mental health support needs of disabled women who experience mental distress has resulted in an insufficient knowledge base of how to support disabled women who may require some form of mental health support For this group of women this has meant that their needs have arguably continued to be neglected and subsequently left unmet Writing from her position as both a social worker and a service user Julia Smith has written an innovative and important text which both discusses a neglected area of personal experience and makes an original contribution to knowledge with regard to both policy and practice
