

Newton's Second Law

A. Select the correct term to complete these sentences:

When a resultant force acts on a mass, its _____ increases in the direction of that force. This change of speed is called an _____. The greater the force acting on the mass, the _____ its acceleration.

The acceleration is related to the mass and force as shown:

Force (N)	=	Mass (kg)	x	Acceleration (m/s²)
----------------------------	----------	----------------------------	----------	---

N = Newtons

kg = Kilograms

m/s² = metres per second squared

B. Answer these questions to 2 decimal places and select the appropriate units.

1. What force is needed to accelerate a 23Kg mass at a rate of 12 m/s²?
2. A 50g toy car is pushed with a force of 1N. Calculate its acceleration.
3. What is the weight (a force) of a 1Kg mass? (The acceleration due to gravity = 10m/s²)
4. What mass has a motorbike, if a force of 1,800N from the engine gives it an acceleration of 6m/s²?
5. A firework rocket has a mass of 120g. Immediately after lift off, the force created by the burning powder is 3.0N, but the friction due to air resistance equals 0.86N:
 - a. Calculate the acceleration of the rocket at this time.
 - b. As the speed of the rocket increases, the size of the friction force due to air resistance also increases. How would this affect the acceleration of the rocket?
 - c. The acceleration was found not to change as much as anticipated. What factor could be causing this to occur?

Physics Fundamentals Newtons Second Law Answers:

Physics, Fundamentals and Frontiers Robert Stollberg, Faith Fitch Hill, 1965 **Selman's The Fundamentals of Imaging Physics and Radiobiology** Victor White, 2020-10-16 This tenth edition of Selman's *The Fundamentals of Imaging Physics and Radiobiology* is the continuation of a seminal work in radiation physics and radiation biology first published by Joseph Selman MD in 1954 by Charles C Thomas Publisher Ltd Springfield IL. Many significant changes have been made in this tenth edition. Color photographs and new illustrations have been provided for several existing chapters and for the new chapters in this book. Revisions and updates have been completed for Chapters 1 through 28 whereas Chapters 29 to 33 are all new. The overall style of Doctor Selman is still present but with any revision the style of the present author is also present. In essence the author's rationale in revising this book was to better reflect current radiology practice and to honor the work of Doctor Selman. Topics discussed in this textbook deal with the physics of x radiation, the biological interaction of radiation with matter and all aspects of imaging equipment and technology commonly found in the modern radiology department. The chapter on computed tomography CT has been heavily revised and updated. Protective measures regarding radiation safety and radiation hazards for workers and patients are thoroughly discussed and new chapters on dual energy x ray absorptiometry DXA, magnetic resonance imaging MRI, ultrasound US, fusion and molecular imaging have been added. This book will be very helpful to students about to take the ARRT R registry examination but it is not a registry review book per se. This book also serves as a good overview of radiologic imaging physics for radiographers and other medical professionals.

College Physics Essentials, Eighth Edition Jerry D. Wilson, Anthony J. Buffa, Bo Lou, 2019-11-15 This new edition of *College Physics Essentials* provides a streamlined update of a major textbook for algebra based physics. This is the first volume and covers topics such as mechanics, heat and thermodynamics. The second volume, available separately, covers electricity, atomic, nuclear and quantum physics. The authors provide emphasis on worked examples together with expanded problem sets that build from conceptual understanding to numerical solutions and real world applications to increase reader engagement. Including over 900 images throughout the two volumes, this textbook is highly recommended for students seeking a basic understanding of key physics concepts and how to apply them to real problems.
