

P. Sci. Waves **Key**

Put all answers on a separate sheet of notebook paper.

- Mechanical waves need a medium through which to transport energy.
- The particles in a surface water wave move in a circle (back-&-forth / up & down).
- Waves in which the particles of medium move at right angles to the direction of the wave are transverse waves.
- The wavelength of a wave is measured from the crest of one wave to the crest of the next.
- If the wavelength of a given wave decreases, you know that its frequency will increase.
- Two waves have the same frequency and wavelength, but the first wave has a greater amplitude. The energy of the first wave greater than that of the second.
- Wave A has a greater frequency than wave B, but the amplitude of the two waves is the same. The energy of wave A is equal to that of wave B.
- The unit for frequency is the hertz.
- A wave will travel only as long as it has energy to carry.
- When you squeeze together the coils of a spring and then release them, you are creating a compressional wave.
- Waves in which the particles of the medium move only in the same direction as the motion of the wave are compressional waves.
- You are creating a wave on a spring. If you start shaking the spring more slowly, the wavelength of the resulting wave will increase.
- If you are lying on a raft, and you notice that the number of waves that go past the raft increases, you also find that the distance between each crest decreases.
- Wave A carries more energy than wave B. Wave B has a smaller amplitude than wave A.
- The energy a wave carries is measured by its amplitude.
- For a given wave, if the frequency doubles, the wavelength is halved.
- When a wave passes from a less dense medium to a more dense medium, the speed may change.
- Repeating disturbances that transfer energy through matter or space are waves.

- The two types of mechanical waves are transverse and compressional (longitudinal).
- If the frequency of a water wave changes, its wavelength must also change.
- The symbol λ (lambda) stands for the wavelength.

Figure 11-1

- In Figure 11-1, identify the following structures:
B wavelength, A crest, C amplitude
- Speed can be determined by dividing the distance traveled by the time. The water waves in a lake travel 4.4 m in 2.0 s. What is the speed of the waves? $y = d/t$ $y = 4.4\text{m} / 2.0\text{s}$ $y = 2.2\text{m/s}$
- An ocean wave has a frequency of 2.0 Hz with a wavelength of 10 m. What is the velocity of the wave? $y = f \times \lambda$ $y = 2.0\text{ Hz} \times 10\text{m}$
 $y = 20\text{m/s}$

- The wavelength of the wave in the diagram is 1.5 m.
- The amplitude of the above wave is 0.5 m.
- A man is standing on the shore of a beach, up to his knees in water. Every 5 seconds a wave breaks on him. What is the period of the wave? 5 seconds

Researched Content by experts Introduction to Psychological Science William J. Ray, 2021-07-19 Introduction to Psychological Science provides students with an accessible comprehensive and engaging overview of the field of scientific psychology. It expertly incorporates a variety of perspectives ranging from neuroscience to cultural perspectives at an introductory level. Ray brings together cutting edge research from traditional psychological literature to modern evolving perspectives and creates a unified approach by focusing on three core themes: Behavior and Experience, an analysis of behavior and experiences observed across a variety of everyday life situations; Neuroscience, an examination of psychological experiences through neuroscience lens ranging from genetic/epigenetic to cortical networks as related to psychology; Evolutionary Human Origins, an exploration of broader scientific questions by examining psychological processes from the perspective of human and cultural history. Through these themes, the book delves into topics like social processes, psychopathology, stress and health, motivation and emotion, developmental sequences, and cognitive functions such as memory, learning, problem solving, and language. Throughout, it helps students to understand the nature of psychological science by addressing common myths and misconceptions in psychology, showing how psychological science can be applied to everyday life, and how new research can be created. Additionally, this student-friendly book is packed with pedagogical features including concept checks to test reader knowledge, extensions features which show how to apply knowledge, and a comprehensive glossary. Reflecting the latest APA Guidelines concerning the essential elements of an introductory psychology course, this text is core reading for all undergraduate introductory psychology students.
