experimental paradigms that assess executive functions such as inhibition planning or action monitoring is influenced by information processing in the bottom up channel. Depending on the type of stimuli used, one hemisphere can be more efficient in processing than the other, and these functional cerebral asymmetries have been shown to modulate the efficacy of executive functions via the bottom up channel. We only begin to understand the complex neuronal mechanisms underlying this interaction between hemispheric asymmetries and cognitive systems. Therefore, it is the aim of this Research Topics to further elucidate how structural or functional hemispheric asymmetries modulate perception, cognition, and behavior in the broadest sense.
