Earthquake Hazards and Compounding Risks Katsuichiro Goda, Tiziana Rossetto, Nobuhito Mori, Solomon Tesfamariam, 2018-03-15 Large scale earthquake hazards pose major threats to modern society generating casualties disrupting socioeconomic activities and causing enormous economic loss across the world Events such as the 2004 Indian Ocean tsunami and the 2011 Tohoku earthquake highlighted the vulnerability of urban cities to catastrophic earthquakes Accurate assessment of earthquake related hazards both primary and secondary is essential to mitigate and control disaster risk exposure effectively To date various approaches and tools have been developed in different disciplines However they are fragmented over a number of research disciplines and underlying assumptions are often inconsistent Our society and infrastructure are subjected to multiple types of cascading earthquake hazards therefore integrated hazard assessment and risk management strategy is needed for mitigating potential consequences due to multi hazards Moreover uncertainty modeling and its impact on hazard prediction and anticipated consequences are essential parts of probabilistic earthquake hazard and risk assessment The Research Topic is focused upon modeling and impact assessment of cascading earthquake hazards including mainshock ground shaking aftershock tsunami liquefaction and landslide

Landscape Evolution in the United States Joseph A. DiPietro, 2012-12-21 Landscape Evolution in the United States is an accessible text that balances interdisciplinary theory and application within the physical geography geology geomorphology and climatology of the United States Landscape evolution refers to the changing terrain of any given area of the Earth's crust over time Common causes of evolution or geomorphology land morphing into a different size or shape over time are glacial erosion and deposition volcanism earthquakes tsunamis tornadoes sediment transport into rivers landslides climate change and other surface processes The book is divided into three main parts covering landscape components and how they are affected by climatic tectonic and ocean systems varying structural provinces including the Cascadia Volcanic Arc and California Transpressional System and the formation and collapse of mountain systems The vast diversity of terrain and landscapes across the United States makes this an ideal tool for geoscientists worldwide who are researching the country's geological evolution over the past several billion years Presents the complexities of physical geography geology geomorphology and climatology of the United States through an interdisciplinary highly accessible approach Offers more than 250 full color figures maps and photographs that capture the systematic interaction of land rock rivers glaciers global wind patterns and climate Provides a thorough assessment of the logic rationale and tools required to understand how to interpret landscape and the geological history of the Earth Features exercises that conclude each chapter aiding in the retention of key concepts

Proceedings of the 6th International Conference on Axiomatic Design , Challenges in Characterizing Small Particles National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Chemical Sciences Roundtable, 2012-05-02 Small particles are ubiquitous in the natural and built worlds and have tremendous impact throughout However a lack of understanding about the properties and chemical composition of small particles limits our

ability to predict and control their applications and impacts Challenges in Characterizing Small Particles Exploring Particles from the Nano to Microscales summarizes presentations and discussions at a 2010 National Academies roundtable Speakers at this roundtable discussed the crucial types of information that need to be determined about small particles in different media They also explored the critical importance of small particles in environmental science materials and chemical sciences biological science and engineering and the many challenges involved in characterizing materials at the nano and microscales The discussions on characterization included static dynamic experimental computational and theoretical characterization The workshop also included several research tool presentations that highlighted new advances in characterizing small particles
