*Property Rights in Outer Space* Matthew Johnson,2024-05-28 This book explores the role of private mining rights in the utopian imaginary of space colonisation It presents a transdisciplinary account of the new and evolving legislative frameworks that have been established in anticipation of commercial exploitation of the mineral resources of the off world frontier Written in an engaging style the book investigates a novel case study in the history of capitalism and the commons the emergence of a nascent space mining industry undergirded by a contentious legislative framework In 2015 the US passed laws that would recognise the claims of US corporations to own and sell space resources This unilateral act of pre emptive law making would

appear to contravene the terms of the UN Outer Space Treaty 1967 which declared that the exploration and use of outer space should be for the benefit of all mankind and not subject to national appropriation Using this central dynamic between privately held mining rights and outer space as a global commons Matthew Johnson constructs an historical sociology of space mining from the deep historical roots of common and private property to the contemporary networks of neoliberalism that have engaged with the commercialisation of space activity The anticipatory expansion of private property claims beyond the Earth both resonates with and problematises the terrain of political history such as the tensions between states and markets public law and private power the commons and exclusive property The emerging cosmopolitics of off world private property mirrors and is often explicitly embedded within neoliberal geopolitics prompting urgent questions about how we can reaffirm principles of democracy and common heritage in the international laws of Earth and space This book is compelling reading for anyone interested in the social study of space law economics technology politics and property rights Solar Energy Update ,1980 *Living in a Nuclear World* Bernadette Bensaude-Vincent, Soraya Boudia, Kyoko Sato, 2022-03-10 The Fukushima disaster invites us to look back and probe how nuclear technology has shaped the world we live in and how we have come to live with it Since the first nuclear detonation Trinity test and the bombings of Hiroshima and Nagasaki all in 1945 nuclear technology has profoundly affected world history and geopolitics as well as our daily life and natural world It has always been an instrument for national security a marker of national sovereignty a site of technological innovation and a promise of energy abundance It has also introduced permanent pollution and the age of the Anthropocene This volume presents a new perspective on nuclear history and politics by focusing on four interconnected themes violence and survival control and containment normalizing through denial and presumptions memories and futures and exploring their relationships and consequences It proposes an original reflection on nuclear technology from a long term comparative and transnational perspective It brings together contributions from researchers from different disciplines anthropology history STS and countries US France Japan on a variety of local national and transnational subjects Finally this book offers an important and valuable insight into other global and Anthropocene challenges such as climate change **Science Teaching in Schools** Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma

based system for 14 19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools [A History of Scientific Journals](#) Aileen Fyfe, Noah Moxham, Julie McDougall-Waters, Camilla Mørk Røstvik, 2022-10-03 Modern scientific research has changed so much since Isaac Newton's day it is more professional collaborative and international with more complicated equipment and a more diverse community of researchers Yet the use of scientific journals to report share and store results is a thread that runs through the history of science from Newton's day to ours Scientific journals are now central to academic research and careers Their editorial and peer review processes act as a check on new claims and findings and researchers build their careers on the list of journal articles they have published The journal that reported Newton's optical experiments still exists First published in 1665 and now fully digital the Philosophical Transactions has carried papers by Charles Darwin Dorothy Hodgkin and Stephen Hawking It is now one of eleven journals published by the Royal Society of London Unrivalled insights from the Royal Society's comprehensive archives have enabled the authors to investigate more than 350 years of scientific journal publishing The editorial management business practices and financial difficulties of the Philosophical Transactions and its sibling Proceedings reveal the meaning and purpose of journals in a changing scientific community At a time when we are surrounded by calls to reform the academic publishing system it has never been more urgent that we understand its history *Physics in Minerva's Academy* Steffen Ducheyne, 2025-01-27 This monograph explains how in the aftermath of the battle over René Descartes philosophy Newton's natural philosophy found fertile ground at the University of Leiden Newton's natural philosophical views and methods along with their underlying distinctions seamlessly aligned with the University of Leiden's institutional religious policy which urged professors and students to separate theology from philosophy Additionally these views supported the natural philosophical agendas of Herman Boerhaave Willem Jacob Gravesande and Petrus van Musschenbroek Newton's natural philosophical program was especially useful in the three Leiden professors' project of reforming existing disciplines and providing them with epistemic legitimacy

**Leave It in the Ground** John C. Berg, 2019-09-03 Employing scientific explanations and hard data this book shows why coal is such a problem how the pro coal forces got to be so powerful and how those forces might be defeated through political activism Coal provided the energy to build modern civilization This energy source raised standards of living multiplied the earth s population and enabled people in developed countries to enjoy leisure time Today we know that if we burn all the coal available climate change will continue to increase But the use of coal isn t purely an environmental issue political and economic forces are also at play This book examines the politics and environmental impact of coal production and distribution presenting a clear point of view that we must shift away from coal use backed by hard data and supplying specific prescriptions for opposing and regulating the coal industry John C Berg explains how ending the burning of coal and of oil and natural gas is a political problem rather than a technical one explodes the clean coal myth providing scientific documentation of how burning coal emits more greenhouse gases per unit of energy than any other fuel and describes how controlling coal use in the United States will also restore the possibility of a meaningful international climate agreement Additionally readers will understand the critical importance of activism from local to international in spurring government regulation to control the coal industry which can only be defeated politically

**The Digital Closet** Alexander Monea, 2023-05-02 An exploration of how heteronormative bias is deeply embedded in the internet hidden in algorithms keywords content moderation and more In The Digital Closet Alexander Monea argues provocatively that the internet became straight by suppressing everything that is not forcing LGBTQIA content into increasingly narrow channels rendering it invisible through opaque algorithms automated and human content moderation warped keywords and other strategies of digital overreach Monea explains how the United States thirty year war on porn has brought about the over regulation of sexual content which in turn has resulted in the censorship of much nonpornographic content including material on sex education and LGBTQIA activism In this wide ranging enlightening account Monea examines the cultural technological and political conditions that put LGBTQIA content into the closet Monea looks at the anti porn activism of the alt right Christian conservatives and anti porn feminists who became strange bedfellows in the politics of pornography investigates the coders

code and moderators whose work serves to reify heteronormativity and explores the collateral damage in the ongoing war on porn the censorship of LGBTQ community resources sex education materials art literature and other content that engages with sexuality but would rarely be categorized as pornography by today's community standards Finally he examines the internet architectures responsible for the heteronormalization of porn Google Safe Search and the data structures of tube sites and other porn platforms Monea reveals the porn industry's deepest darkest secret porn is boring Mainstream porn is stuck in a heteronormative filter bubble limited to the same heteronormative tropes tagged by the same heteronormative keywords This heteronormativity is mirrored by the algorithms meant to filter pornographic content increasingly filtering out all LGBTQIA content Everyone suffers from this forced heteronormativity of the internet suffering Monea suggests that could be alleviated by queering straightness and introducing feminism to dissipate the misogyny
