Research on Physics Education E.F. Redish, M. Vicentini, 2004-08-09 Physics Education research is a young field with a strong tradition in many countries However it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy The topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment and cultural aspects Information is also given on the organizations involved in connecting various aspects of Physics Education the International Commission on Physics Education the European Physical Society and the European Physics Education Network

What works in early reading materials Ana Robledo,Amber Gove,2019-02-25 Access to books is key to learning to read and sustaining a love of reading Yet many low and middle income countries struggle to provide their students with reading materials of sufficient quality and quantity Since 2008 RTI International has provided technical assistance in early reading assessment and instruction to ministries of education in dozens of low and middle income countries The central objective of many of these programs has been to improve learning outcomes in particular reading for students in the early grades of primary school Under these programs RTI has partnered with ministry staff to produce and distribute evidence based instructional materials at a regional or national scale in quantities that increase the likelihood that children will have ample opportunities to practice reading skills and at a cost that can be sustained in the long term by the education system In this paper we seek to capture the practices RTI has developed and refined over the last decade particularly in response to the challenges inherent in contexts with high linguistic diversity and low operational capacity for producing and distributing instructional materials These practices constitute our approach to developing and producing instructional materials for early grade literacy We also touch upon effective planning for printing and distribution procurement but we do not consider the printing and distribution processes in depth in this paper We expect this volume will be useful for donors policymakers and practitioners interested in improving access to cost effective high quality teaching and learning materials for the early grades *Harcourt Science: Physical science, [grade] 4, Units E and F, teacher's ed.
