*Livelihood Enhancement Through Agriculture, Tourism and Health* Narayan Chandra Jana, Anju Singh, R. B. Singh, 2022-01-18

Agriculture is the backbone of our economic system. It provides not only food and raw material but also employment opportunities to a very large number of people. Higher atmospheric temperature has an impact on crop yields while the changes in rainfall could affect both crop quality and quantity. Climate change therefore could increase the prices of major crops in some regions. For the most vulnerable people, lower agricultural output means lower income. In addition, climate change is expected to increase the risk of illness and death from extreme heat and poor air quality. Recent evidence is the COVID-19 pandemic. Furthermore, climate change also affects the occurrence of other infectious diseases. A number of well-known diseases are climate sensitive: malaria, dengue fever, and cholera, among others. Tourism is considered as an industry and alternative contributor to a nation's income. It can generate employment opportunities and boost up the economy. This book, consisting of 26 chapters, focuses on the issues of agriculture, tourism, and health for livelihood enhancement. It is essential to discuss these diverse issues in the field of geography as it encompasses interdisciplinary topics. The range of concerns at the national, regional, and local levels is not confined to geography only but also involves other disciplines as well. Therefore, this book is a valuable source for scientists and researchers in allied fields such as livelihood, agriculture, land use, tourism, management, health care, and tribal studies. Furthermore, this book can be of immense help to the researchers, planners, and decision makers engaged in solving problems in these areas in developing countries and beyond.
