## Question 2.7:

A student measures the thickness of a human hair by looking at it through a microscope of magnification 100. He makes 20 observations and finds that the average width of the hair in the field of view of the microscope is 3.5 mm. What is the estimate on the thickness of hair?

## Answer 2.7:

Magnification of the microscope = 100

Average width of the hair in the field of view of the microscope = 3.5 mm

∴ Actual thickness of the hair is  $\frac{3.5}{100} = 0.035$  mm.

## Question 2.8:

Answer the following:

- (a) You are given a thread and a metre scale. How will you estimate the diameter of the thread?
- (b) A screw gauge has a pitch of 1.0 mm and 200 divisions on the circular scale. Do you think it is possible to increase the accuracy of the screw gauge arbitrarily by increasing the number of divisions on the circular scale?
- (c) The mean diameter of a thin brass rod is to be measured by vernier callipers. Why is a set of 100 measurements of the diameter expected to yield a more reliable estimate than a set of 5 measurements only?

## Answer 2.8:

- (a) Wrap the thread on a uniform smooth rod in such a way that the coils thus formed are very close to each other. Measure the length of the thread using a meter scale. The diameter of the thread is given by the relation,  $\text{Diameter} = \frac{\text{Length of thread}}{\text{Number of turns}}$
- (b) It is not possible to increase the accuracy of a screw gauge by increasing the number of divisions of the circular scale. Increasing the number divisions of the circular scale will increase its accuracy to a certain extent only.
- (c) A set of 100 measurements is more reliable than a set of 5 measurements because random errors involved in the former are very less as compared to the latter.

## Question 2.9:

The photograph of a house occupies an area of  $1.75 \text{ cm}^2$  on a 35 mm slide. The slide is projected on to a screen, and the area of the house on the screen is  $1.55 \text{ m}^2$ . What is the linear magnification of the projector-screen arrangement?

## Answer 2.9:

Area of the house on the slide =  $1.75 \text{ cm}^2$

Area of the image of the house formed on the screen =  $1.55 \text{ m}^2 = 1.55 \times 10^4 \text{ cm}^2$

Arial magnification,  $m_a = \frac{\text{Area of image}}{\text{Area of object}} = \frac{1.55}{1.75} \times 10^4$

∴ Linear magnifications,  $m_l = \sqrt{m_a}$

$$= \sqrt{\frac{1.55}{1.75} \times 10^4} = 94.11$$

*Physical Chemistry of Polymer Solutions* K. Kamide,T. Dobashi,2000-10-16 This book is mainly concerned with building a narrow but secure ladder which polymer chemists or engineers can climb from the primary level to an advanced level without great difficulty but by no means easily either This book describes some fundamentally important topics carefully chosen covering subjects from thermodynamics to molecular weight and its distribution effects For help in self education the book adopts a Questions and Answers format The mathematical derivation of each equation is shown in detail For further reading some original references are also given Numerous physical properties of polymer solutions are known to be significantly different from those of low molecular weight solutions The most probable explanation of this obvious discrepancy is the large molar volume ratio of solute to solvent together with the large number of consecutive segments that constitute each single molecule of the polymer chains present as solute Thorough understanding of the physical chemistry of polymer solutions requires some prior mathematical background in its students In the original literature detailed mathematical derivations of the equations are universally

omitted for the sake of space saving and simplicity In textbooks of polymer science only extremely rough schemes of the theories and then the final equations are shown As a consequence the student cannot learn unaided the details of the theory in which he or she is interested from the existing textbooks however without a full understanding of the theory one cannot analyze actual experimental data to obtain more basic and realistic physical quantities In particular if one intends to apply the theories in industry accurate understanding and ability to modify the theory are essential **2024/2025 ASVAB For Dummies** Angie Papple Johnston, 2024-04-09 Get the score you need to get the job you want The bestselling ASVAB For Dummies is back with an updated and expanded annual edition This trusted study guide will help you succeed on the essential military recruitment test Now with more examples walk throughs and practice questions you can land the score that will qualify you for your preferred military job With practice tests in the book and online videos and hundreds of digital flashcards this Dummies resource is perfect for all things ASVAB Trusted by military recruiters across the country this book also includes insider tips and tricks for test day success Study at your own pace and make your dreams possible with ASVAB For Dummies Learn from simple explanations of all the content covered on the ASVAB plus tons of resources for studying Follow detailed study plans that will help you prepare 12 weeks 6 weeks 4 weeks or 1 week before the test Take practice tests and work through detailed answer explanations to improve your score Get even more practice online with practice tests flashcards and videos For years ASVAB For Dummies has been helping recruits launch their military careers right Now it's your turn Educart NEET 37 Years Biology Solved Papers (PYQs) Chapterwise and Topicwise for NEET 2025 Exam Educart, Dr. Rakshita Singh, 2024-07-25 *Handbook of Exact Solutions to Mathematical Equations* Andrei D.
